SEEKING THE MOUNTAINS OF MYSTERY

An Expedition on the China-Tibet Frontier to the Unexplored Amnyi Machen Range, One of Whose Peaks Rivals Everest

By Joseph F. Rock

Leader of the National Geographic Yunnan Expedition, 1927-1930
Author of "Life Among the Lamas of Chokri," "Through the Great River Trenches of Asia," "The Land of the Yellow Lama," etc., in the National Geographic Magazine

With Illustrations from Photographs by the Author

"T"O-DAY the map has no more secrets," Idle minds repeat that parrot phrase. But who knows all Tibet, or its far-away frontiers on western China? Even its own prayer-muttering tribes know only their own bleak, wind-swept valleys.

After dangerous, difficult months, I reached the headwaters of the 2,000-mile-long Yellow River and the towering, unexplored range of the Amnyi Machen. Twenty-eight thousand feet, or almost as high as Everest, its tallest peak lifts its snow-white head, majestic as the Matterhorn. Here, in remote, almost inaccessible valleys, I found countless wild animals still unafraid of man, peaceful as in Eden. Through deep, tree-lined chasms roared the upper reaches of the mighty Yellow River, flowing here at an elevation of 10,000 feet above the sea! Here, in July, was ice, and flowers bloomed in the snow.

WORLD MAP SECRETS ON THE CHINA-TIBET FRONTIER

And time turns back a thousand years when one talks to the superstitious and vexatiously inquisitive, suspicious folk who inhabit this lonely nook of the world.

"The earth is flat," they say. "In its middle stands a big mountain. The sun sets by going behind this. "In far-away lands, men fly, we have heard. But in big eagles; if not in eagles, then in something that must be covered with eagle feathers. And in other lands there are men with the heads of dogs, of yaks and other beasts."

A miserable land it is, of poverty and incredible filth; a land cut off from all the modern world; a region which, for uncounted centuries, has had its own forms of government, of religion and social customs; yet a region which knows no railway, no motor car, no radio, or aught of all that science and invention have given the world since Marco Polo's day.

THE FIRST WHITE MAN TO APPROACH THE AMNYI MACHEN FROM THE EAST

Into this region no Chinese dares venture. Ninety thousand or more of the warlike Ngoloks live here, and other tribes of Tibetans, with whom they quarrel and fight. Yet of these local wars, not even an echo ever reaches the outside world. Here I saw men with spears 30 feet long, and a room in a lamasery wherein more than

A DEVOUT TIBETAN WHIRLS A DOUBLE PRAYER WHEEL

The smaller upper wheel, of silver, revolves separately from the lower; but each contains a roll of paper on which is printed the standard formula, "Om mani padme hum." Each time either wheel revolves the Tibetan is credited with a prayer, according to his belief. This man is a Drokwa, or nomad Tibetan.

A VENERABLE MOSLEM OF OLD TAOCHOW

He belongs to the New Sect, or Sin Chiao, that believes in a savior who lives in Old Taochow and who is known as Jesus or Alisa. The sect also believes in reincarnation. These Mohammedans trade exclusively with the Tibetan nomads, selling brass and copper calibrons, pots, kettles, and barley, taking in exchange wool, furs, and musk.
50 imported clocks were ticking, no two keeping the same time! No, our world map is not yet without its secrets.

The great Amnyi Machen Range is shown on modern charts of Asia, though it is usually incorrectly spelled Amne Machin. It lies west of the great bend of the Yellow River (Hwang Ho) within the Koko Nor territory, something more than 1,300 miles westerly from Shanghai and 1,200 miles in a northerly direction from Rangoon. It is this range which forces the Yellow River to describe such a large bend (see map, pages 138-9).

Except for occasional wandering missionaries, no whites ever make this hard, perilous journey to the Chino-Tibet frontier. The Russian explorer Roborovski, in the winter of 1895, tried to reach the Amnyi Machen, but was attacked at a spot northeast of the Manguan Pass and driven back by the "Tanguts," the Mongolian name for Tibetans.

My own visit, what from extraordinary hardship and the perils of bandits, was so brief that I could make only limited observations. So, as yet, the world knows only from hearsay of all the Amnyi Machen’s mysterious valleys, its lawless Ngolok tribes, and the queen who was supposed to rule over them.

That it fell to my lot to reach this forbidden stronghold of the Ngoloks was due to a chance encounter, back in 1923, with that famous British explorer, Gen. George Pereira. On my way from Burma to southeast Tibet, as leader of an expedition for the National Geographic Society, I met the English traveler at Tengyueh, in Yünnan. He had then recently completed his now historic march from Peking (Peiping) to Lhasa, and, during our visit, he told me of an amazing landmark passed on his westward journey—the great snow-capped Amnyi Machen Range, which he saw from a distance of more than 100 miles.

Very likely, he remarked, the Amnyi Machen, when surveyed, might prove higher than Mount Everest. He also spoke of the turbulent Ngolok tribes and their queen, and of his own ambition to attempt a journey of exploration to their country.

But God disposes. General Pereira died
THE GREAT LABRANG BUDDHA'S PRIVATE CHAPEL.

The Dju Kung, or Lord's House, affords an impressive example of sumptuous temple decoration. The garlands hung on strings before the altar are from seeds of Oroxyllum indicum, the East Indian trumpetflower.
THE NORTHEASTERN END OF LABRANG MONASTERY

The religious community is surrounded by low, narrow sheds containing prayer wheels made of yak hide, gilded and painted with the sacred formula “Om mani padme hum.” The lamasery houses nearly 3,000 monks (see, also, text, page 145).

AT HIGH ALTITUDES THE CHINA-TIBET FRONTIER IS A COLD AND EMPTY COUNTRY

Filing through Shawo Valley in the month of May, the author’s yak caravan marched at an elevation of 11,500 feet. This point was reached six days west of Labrang, on the trip to Radja.
A PUBLIC MARKET BEFORE THE LABRANG MONASTERY

Vendors display their wares in small wooden booths, which are stored in the nearby lamasery when not in use. The bleak nature of the region is indicated by empty hills in the background.
FROM CHONI THE AUTHOR TRAVELED WESTWARD TOWARD THE AMNYI MACHEN AS FAR AS SHACHU VIMKAR:
MAP OF THE ROUTE
to the
AMNYI MACHEN MOUNTAINS

ROUTES TO THE SOUTHEAST INDICATE SIDE EXCURSIONS MADE BY DR. ROCK, TO BE DESCRIBED SUBSEQUENTLY
When I reached the border between Chinese and Russian, I could not help feeling that I was entering a new world. The landscape, the people, the customs—all were different from what I had expected. I was amazed at the variety of the Chinese people, some of whom were very courteous and others very rude. I was also impressed by the size and grandeur of the Chinese cities.

As I traveled farther into China, I was struck by the beauty of the countryside. The green fields and the blue sky made a wonderful contrast. I was also impressed by the generosity of the Chinese people, who often shared their food and water with me.

In my opinion, the Chinese are a wonderful people, full of energy and spirit. I was impressed by their love of their country and their desire to improve it. I hope that someday I will be able to visit China again and see more of its beauty.
I learned that the 12-year-old Living Buddha had retired to this place because of a war raging between his people about Labrang and the Moslems of Sining, led by General Ma Chi, ruler of the Kokho Nor country.

But, insignificant as Angkur Gomba itself was, one quickly discerned that it now sheltered an important personage. From the quarters assigned us, in one end of the lamastery, we could see over the walls and observe the motley concourse of people doing obeisance to the Living Buddha. An unbroken line of grassland nomads—men, women, and children—moved around the lamastery, making prostrations or turning prayer wheels and muttering the eternal monotonous phrase, "Om mani padme hum!" (O, the Jewel in the Lotus, Amen).

Under a shed near our quarters were suspended hundreds of yak and mutton shoulder blades with prayers printed on them. After the pilgrims had made their cash offerings to the boy Buddha and been blessed, they crowded into this shed to rattle these dry, printed bones. A quick, easy way to pray! This ritual of bone-rattling, with the noise of trumpets, cymbals, and conches, filled the air as we went to our audience with the Buddha.

Enthroned on the dais, clad in yellow satins and with the miter of a Living Buddha on his brow, sat the boy god. As we came in he arose slowly and bowed. I presented him with the usual kattak, or silk scarf, while one of my men lifted up a tray of presents, which was accepted for the Buddha by an attendant lama. My cook, knowing the required Tibetan dialect, acted as interpreter. Through him I explained to the boy Buddha, or rather to his father, who waited on him, my reasons for wishing to explore the Amnyi Machen, and requested a letter to the Buddha of Radja and also letters to some of the Ngolok chiefs.

I readily got the letter to the Buddha of Radja Gomba, but some weeks were to elapse and a bloody war was to be fought between the nomad Tibetans and the Moslems of Sining before I obtained...
TIBETAN NOMADS CARRY SWORDS AND RIFLES

On their rifles members of the Sokwo Arik tribe fasten wooden props, on which they rest the weapons when firing. They never fire a rifle without using such a rest.

A PORTABLE TALKING MACHINE AMAZED AND DELIGHTED THE TIBETANS

Nomads of the Sokwo Arik (Tibetan) tribe are listening to the Caruso record, "La Donna è Mobile," at the author's camp in the grass lands of the Sokwo Arik winter quarters, four days west of Labrang. The natives called the phonograph a Russian magic box.
my letters to the Ngolok chiefs.
To give the reader a more graphic picture of how precarious life is in these wilds, let me hastily sketch some aspects of the war which interrupted my progress toward the Amnyi Machen.

A SLAUGHTER RECALLING THE DAYS OF GENGHIS KHAN

When the fight started, the Tibetans took the offensive and drove the Moslems out of Labrang; but soon the latter returned with reinforcements and defeated the Tibetans in fierce battles fought on the Ganja Plain and in Song Chu Valley. In these frightful slaughters, however, the wild Ngura, nomad Tibetans, made a most dramatic showing; they charged against the Moslems at full speed on horseback, impaling them on their 30-foot lances like men spearing frogs. Far more Moslems were killed with these spears than with guns.

Under any skilled leader the Tibetans could have whipped the Moslems; but there was no coordination among these wild tribes. In fact, during the fight, the Amchoke, although fighting with the Tibetans, took advantage of the battle's confusion to sneak back and rob the tents of their own allies.

Many of the Tibetans who fell alive into enemy clutches were hung up by their thumbs, disemboweled alive and their abdominal cavities were then filled with hot stones.

The Kansu Government troops had promised to help the Tibetans, but they seemed to have no stomach for all this slaughter; anyway, they failed to appear. Finally, despite fierce resistance by the brave but unorganized tribes, the better-trained Moslems routed them completely. Labrang remained in Mohammedan hands. Hetso monastery was plundered and a Living Buddha with 15 monks was slain.

Raiding the grass lands, the Moslems had slaughtered women and children as-in the ruthless days of Genghis Khan.

TIBETAN HEADS DECORATED GARRISON WALLS

Frightful, indeed, was the aspect of Labrang after the fight. One hundred fifty-

THE SON OF ARIK JOJORD, SOKWO ARIK NOMAD CHIEF, REVEALS NEGROID FEATURES

He wears a single sheepskin garment. About his neck is a rosary bearing a silver talismanic box.
four Tibetan heads were strung about the walls of the Moslem garrison like a garland of flowers. Heads of young girls and children decorated posts in front of the barracks. The Moslem riders galloped about the town, each with 10 or 15 human heads tied to his saddle. Heavy tread the heels of the Kansu Mohammedans on these nomad people of Tibet.

Amid this carnage we were forced to give up for the time being any hopes of marching on to our difficult goal.

Glad to escape from a stricken land, I marched my little band north to camp and explore during the rest of the summer in and around the great Koko Nor and in the Richthofen Range. That journey is another story. Late in the fall we returned to Choni to winter. Here, during the long months, I talked with the lamas, attended their ritual dances and festivals, took many photographs with the help of Prince Yang, and gathered all the information I could about the Ngoloks. In the meantime, from the boy Buddha of Labrang I had obtained letters of introduction to the leading Ngolok chiefs, those ruling over the important Rimong, Kangsar, and Kanggan tribes, who have their camps west of the Yellow River and south and west of the Amnyi Machen Range.

The Start for the Amnyi Machen

It was late in the spring, almost a year and a half after my start from America, when I was again ready to press on toward the mountains of mystery.

When we left Choni, we had supplies for a five months' march, including food, a photographic outfit, cotton for stuffing any birds collected, grass paper for packing plant specimens, powdered charcoal for packing seeds; also beans for horse feed and many presents for the important people we were to meet. As coined money is unknown in this part of the world, we carried much lump silver, cotton drill, sateen and other cloth, as well as needles and thread for use in barter.

Dressed in gray felt raincoats, well armed, and escorted by a cavalry guard, we made an imposing party as we marched out of the gates of Choni. We used yak carts to haul our supplies as far as the
old town of Taochow. From there to Labrang 34 mules carried our loads. At this influential monastery we spent nearly a week making plans to cross the grass lands on our way to the Amnyi Machen.

I engaged 20 armed and mounted men of the nomad Sokwo Arik tribe of Mongol origin to escort us and to supply 60 big yaks. We had also to buy yak-hair hobblies for the horses. These were used in the daytime, when the horses grazed. At night, to keep thieves from driving them off, we had to hobble them with locked irons.

LABRANG, ONE OF THE LARGEST MONASTERIES IN EASTERN TIBET

These days at Labrang taught me much of this bleak, dusty, religious stronghold, 8,585 feet above the sea. To-day nearly 5,000 lamas live in this huge monastery. Its site, once a great marsh, was changed into dry land by the prayers of a former Buddha, I was told (see pages 136, 137).

On a hillside opposite the monastery grows a forest of fir and spruce. It is of miraculous origin, says tradition. Long ago a famous monk, the founder of Labrang, got a haircut. His hair, scattered over the hillside, took root and produced this fine forest!

There are 30 large buildings in Labrang which contain chanting halls or which serve as the homes of Living Buddhas. Many hundreds of smaller buildings house the lamas. With their great wooden shutters, the houses look like jails.

Some of these structures are from four to five stories high. Some are red; others are yellow with green roofs. All seem very old. On a hillside, towering above all others, stands the residence and private chapel of the chief Buddha. Its roof is covered with gold sheets, or probably with bronze sheets over which gold has been plated (see page 135).

Five giant kettles, each six feet in diameter, equip a monster kitchen. Here food sufficient to feed 4,000 lamas can be boiled at one time. It usually consists of butter tea or rice gruel.

Amazing is the main chanting hall, which seats 4,000 persons. One hundred forty red columns, 40 feet long, support its
roof. In another hall, preserved in massive silver urns, are the remains of the four previous incarnations of a Buddha, the founder of Labrang, who traveled widely in Mongolia and China and gathered much silver used in building this monastery.

The big hall is unclean. After prayers the lamas are fed here, and the floor is thick with tea, rice gruel, and other food dropped there in years gone by and now trampled hard. About the padded strips of carpet on which the lamas sit, this ancient food is many inches thick.

I called on the Abbot in charge. He received me in his room, which was beautifully painted and paneled. On a shelf stood lovely porcelain bowls made during the reign of Kien Lung; others dated back even to Kanghshu. I also saw here hand-somely carved silver chests containing gilded or gold images. There were also fine carpets, painted and lacquered tables, and other signs of wealth and plenty.

A TALK WITH THE ABBOT OF LABRANG

I had an extraordinary interview with the Abbot. Among other things, he asked me if I had ever been in a land where the people had the heads of dogs, sheep, and cattle. When I said that such people did not exist, he smiled politely.

“Oh, yes, they do,” he said. “Our books tell of such people.”

He also asked me what I thought about the shape of the world. He said he believed the earth was flat, and that in its center was a lofty mountain, behind which the sun disappeared and thus produced night. He also said that foreigners had verified the existence of this big mountain by flying over it. His simplicity and childlike credulity were astounding.

Adjoining this monastery is a trading village and the barracks of the Moslem soldiers. Here is incredible filth. Walls are built of sheep and yak bones. The ground is littered with bits of skin, legs, hoofs, and the bones of animals. Frozen dogs lie in the middle of the street, and there are dead birds and stagnant pools of blood from slaughtered sheep and yak, as well as entrails, bits of wool, and discarded parts of the slain animals, among which dogs and chickens prowl for food.

I hastened back to my clean quarters.

Outside, the wind howled and drove filth-laden dust across a dreary landscape.

It was now the fifth of May, yet a blizzard raged. At dawn our 60 yaks were driven in by the nomad escorts. Accompanying me was an extraordinary American character, a missionary whom I found working among the people about Choni and engaged as Tibetan interpreter. He was dressed now in nomad garb.

THE EXPEDITION’S TROUBLES ARE NEVER OVER

I could hardly believe that, after the many months of delay, the day of departure was really at hand. But, of course, our troubles were never over. The nomads, familiar only with handling bags and bundles, did not know how to tie our boxes and Army trunks on the yaks, so many a load fell off and had to be tied on again. Soon our caravan was scattered out for a distance of a mile.

Out from Labrang the trail ran up a valley on the left side of the Song Chiu stream. Natives ran out to gaze at us as we passed. Out of the Labrang Valley we emerged into the grass lands, or yet another broad valley. Here the fearless Xgura tribe had defeated the Moslems, and the grassy plain was still strewn with the bones of those who fell in that fierce fight (see, also, text, page 141).

Now we had indeed left the world behind. Slowly we made our way over the snow-covered valley of the Song Chiu. Beside the loaded yaks the mounted nomads, clad in sheepskins and carrying rifles and their dreaded 30-foot spears, rode along, whistling (see, also, page 136).

Night came and we camped. In each yak’s nose is a ring to which is tied a small rope; this, in turn, is tied to a long picket line.

To start their fires the Tibetans used a crude sheepskin bellows. We put out sentries, many of whom had mastiffs with them. Great was the astonishment of the tribe when I played my phonograph and when, for the first time, the “canned” voices of Caruso, Melba, and others were heard in the high grass lands. The altitude of our first camp was 10,250 feet, estimated by boiling point.

I studied these Tibetan nomads. A swarthy, stalwart lot they were, wearing
A MARVEL OF THE SER CHEN GORGE, OR GREAT GOLD VALLEY

The awe-inspiring canyon has been cut by water from the red sandstone. In the walls of the canyon are many caves. A man stands at the edge of the glacier, which is discharging from the cavern in the background. Here junipers grow at 10,400 feet elevation (see, also, text, page 158).
THE LAMASERY OF RADJA, NEAR THE HEADWATERS OF THE YELLOW RIVER.

Standing 10,000 feet above the sea, at the base of a 1,500-foot bluff, only about two-thirds of this mysterious lamasery is visible in the photograph (see text, page 159). To the left, at the top of the slope and under the sheer rock wall, are the quarters of hermit monks (see, also, illustration, page 153).
THE AUTHOR'S IMPOSING YAK CARAVAN ASSEMBLED IN THE COURTYARD AT DZANGAR MONASTERY

Ready for the march to Radja, on the Yellow River, the yaks are all loaded. Each pack is guarded against rain by a heavy felt cover. From the roof, a Bhuddha and his steward enjoy the excitement of the start.
THE YELLOW RIVER, SEEN FROM THE SUMMIT OF AMNYI CHUNGUN,
MOUNTAIN GOD OF RADJA

The highest point of the cliff that overshadows the Radja Lamasery is 11,590 feet above sea level. Black dots to the left of the river are the camp of Hdzanggur Ngoloks (see, also, page 157).
large sheepskin coats with long sleeves. When driving yaks, they slap the animals over the back with these sleeves. As soon as their tea had boiled, they took out a ladleful, put butter in it, then threw it out of their chief's tent, at the same time yelling prayers to the mountain god. They called all foreigners "Urusu," or Russians. My phonograph they called a "Russian magic box."

I slept lightly that night, what with barking dogs and the firing of rifles by our sentries to scare away thieves. In the morning my thermometer stood at 25 degrees Fahrenheit.

These grass lands in summer are veritable bogs. The water-soaked ground reminded me much of some of the summit bogs in the Hawaiian Islands.

At lunch time we let our laden yaks loose to graze. The horses were hobbled with hair ropes, one front leg tied to one hind leg. If ever a man should lose his horse in that wide, open country it might be gone for good, as lassos are unknown.

Near us was an abandoned nomad camp where the Moslems had done their worst, killing hundreds. Now not a soul was visible in the whole wild, dreary region of great bogs and streams of quicksand.

WATCHED BY ROBBER TRIBES

One of my boys was thrown by his horse. It galloped away, empty stirrups flying. Before we could catch it ten armed nomad robbers rushed out from hiding, encircled the horse and drove it off. This made me realize how the Amchok and perhaps other robber tribes were watching us.

For some days we continued over dreary snow-covered or water-soaked land, dark under low-hanging clouds.

The Sokwo Ariks proved a surly escort. One villain, with nose and lips split from many battles, threatened me with his spear simply because I urged him to protect his loads with the usual felt covers.

Crossing one of the divides between Labrang and the Yellow River was a physical ordeal. A 50-mile gale blew powdery snow over the ridges and whirlwinds sent white columns spinning high in air. Our figures became hazy white outlines in the blinding storm. With numb fingers I took photographs of the panting yaks floundering like huge snowplows through the pass. At the summit, 13,000 feet up, the wind nearly blew us from our horses. I felt my cheeks freezing.

Descending, we saw in a valley at our right a deserted camp of the nomads. There were old mud stoves and so-called sacrificial altars made of square blocks of yak dung piled about three feet high. Here they burned their sacred offerings of juniper twigs. We paused a while and our yaks pushed away the snow with their noses in a search for bits of grass.

Though the wind still blew, it was now dry, for it came off the Gobi. Crossing on over the Tek Gar Tang plain, we came down to the camp of the Sokwo Ariks on the Mamo Chung, at an elevation of 11,500 feet. Although they are Tibetans, these tribesmen live in Mongol felt yurts instead of yak-hair tents. Because of their fierce dogs, which attack all strangers, we camped a little below them.

NOMADS LAUGH AT OPERATIC SONGS

We rested here a day and obtained fresh yaks to take us on to Dzangar, a monastery in a ravine not far from the gorges of the Yellow River. It was to Dzangar only that the Sokwo men had agreed to escort us.

The valley about our Mamo Chung camp fairly swarmed with wild fowl, and I feasted. This amazed the nomads, who consider fowl and eggs unclean. Here again I set up my phonograph. The men roared with laughter at the pathetic songs from "La Bohème" and "Pagliacci." Sitting about, listening to the music, they smoked, lighting their pipes with smoldering yak dung. I bought fuel here, paying for it with needles and thread.

With fresh yaks we resumed our march, going into the Htse Chu Valley. The river has its source not far from the Yellow River. It flows east, bends sharply north, then south and southwest into the Yellow. We forded it at an elevation of 11,250 feet, at the same place where the German traveler, Futterer, coming from the north, crossed it some years ago. In fact, it was Futterer who put the Htse Chu on the map. Later he was robbed by nomads and arrived half-naked at Taochow. On this river we found many ducks and even sea gulls, which apparently summer on the waters of the Koko Nor.
THE CHIEF LIVING BUDDHA OF RADJA LAMASERY

He is considered the incarnation of the mother of Tsongkapa, the founder of the Yellow Reformed Sect of Buddhists, who are called the Gelugpa, or Followers of Virtue.

West by southwest from here I saw a conspicuous range with five peaks, the two central peaks being very prominent. I estimated this range to be about 16,000 feet high. Natives call it the Arie Dzo Ngon Ma.

A TIBETAN TEA PARTY

Camping next on the Chonakh River, a tributary of the Htse Chu, I heard of an 81-year-old Buddha living near by in a yurt. It was our policy always in this land, where travelers are regarded with suspicion, to make friends as we went. So I called on the old Buddha and presented him with pictures of the Dalai and Pachen Lamas. Then we went, as is the custom there, to take tea with his steward. This sounds quite formal, like polite life in England or America, but a Tibetan tea party is, to say the least, a gastronomic endurance test which no squeamish soul could survive.

In the steward's big tent a mud stove was roaring. From curiosity, many nomads with their wives and children followed us as we went in. They were husky, well-built people. In this raw land only the fittest survive.

Soon an old woman brought out some bowls from a pile of sheep manure, which served for fuel as well as a sideboard. She took some ground-up sheep dung in her hand and scoured the dirty bowls; then she polished them with a filthy rag which hung to her girdle and dragged on the filthy ground when she walked. With her dirt-incrusted hands she poured tea into these bowls and they were passed around. I set down these disagreeable facts only to show in what squalor these nomad Tibetans survive.

A wooden box was now set before us. In it lay dirty lumps of yak butter, covered with old dung dust and other unwholesome things. From this box the fingers of many a nomad had dug before me, and I could see the grooves left in the unpalatable mass by their finger nails.

In another compartment of the box was roasted barley flour, or tsamba, the staple food of the Tibetans. I shrank from either tea or food, but I could not offend
HERMIT QUARTERS OF THE MONKS OF RADJA MONASTERY

The religious recluses subsist on barley flour in winter and on boiled nettles in summer. Their cells are under the conglomerate cliffs back of Radja Monastery, at an elevation of 10,700 feet (see, also, illustration, page 148, and text, page 160).
these simple people, whose impulses were hospitable; so I whistled up courage enough to raise the tea bowl to my lips and take one tiny sip. Fortunately, the old Buddha at that moment sent word that he was ready to have his picture taken, and I had an excuse to leave the tea party without being rude.

We were glad when, after two more days of riding over a monotonous, rolling grass country, we came to a valley called Gan Mar. Through it a stream flows southeast. Wolves ran along parallel to our track at a safe distance, or sat up on the ridges and watched us as we passed. Herds of antelope appeared, too.

Farther on, many black Tibetan tents of the Tsokhar people dotted the valley. The weather here was most fickle. Nowhere have I ever observed such quick changes. As we passed the Tsokhar tents, the air was balmy, almost sultry. Then suddenly a cold blast hit us and hard snow pellets rattled on our coats. In an hour, it was warm again. That night we camped at 12,100 feet, on the banks of the Runa.

Beautifully colored partridges and many rabbits and marmots flew or scampered up the ravines for cover next day, as we crossed the high Nyinser Pass. Now the grass lands were behind us; we were definitely in the mountain regions. Rhododendron scrub covered the slopes of ravines and gorges.

MARMOTS WHISTLE AT THE EXPEDITION'S DOG

Our dog chased marmots that day until ready to drop from exhaustion. These creatures, which resemble prairie dogs, would sit erect in front of their burrows and whistle at him. Those near their holes easily escaped him by ducking in; but if they were foolish enough to whistle while away from home on a forage, the dog nabbed them. Usually he was victorious; but now and then he retreated with a howl of pain and disgust, as one of the
agile rodents valiantly gave battle and bit him on the lips or nose.
Scores of curious lamas sat on the flat roofs of Drangar to watch us as we filed in and unloaded our yaks.

Here, having fulfilled their contract, our unruly nomad escort left us. They quit without a word of farewell or the slightest sign of interest in me. Having been paid in advance, they simply dumped all my belongings into the manure that covered the compound and walked off. But I was equally glad to be rid of them.

Next day, while fresh yaks and guides were being obtained, I went south five miles to see the Yellow River. My trail ran down the Gokhub Valley, then over a ridge to another ravine. Down both flow streams which unite and empty in the Yellow. From a high bluff near their confluence I beheld the Yellow River.

**THE WHITE MAN’S FIRST VIEW OF THE YELLOW RIVER GORGES**

No other white man, since time began, ever stood here and beheld these deep gorges of the Yellow River.

Seven hundred feet below the bluff on which I stood flowed the Yellow River, 10,200 feet above the sea. Spruces, birches, and willows clung to the walls of the gorges.

The only way into the Yellow River gorge at this point is through a narrow valley called the Large Gate. We went down to it. Past its mouth roars the main channel of the great river, forming here a terrific whirlpool.

In the cloth beside him is barley, of which a handful was thrown into the river as an offering to imaginary Buddhas, which he “prints” on the face of the waters (see illustration, opposite page).

**BRASS MOLDS USED IN “PRINTING” BUDDHAS IN THE YELLOW RIVER**

On the walls of the gorge grow dense groves of spruce. I asked the guide to cut the limbs from the trunk of one, so that I might make a close-up picture. But he objected, saying the mountain god of the place would punish us, for once before men had cut trees here, blood had flowed from the stumps and two Tibetans had been crushed to death by the falling trunks. Plainly, said the Tibetan, the god was displeased.

Drangar shelters 500 lamas and 15 Living Buddhas. The only object of interest
Ridja Lamasery, huddled beside the upper reaches of the Yellow River in Tibet.

The author's compound can be seen at the extreme left, separated from the monastery by a gully.
MONKS CELEBRATING THE FESTIVAL OF THE MOUNTAIN GOD, AMNYI CHUNGN

On the 11th day of the fourth moon prayers to this patron of Radja are held on the lofty slopes back of the monastery. In the tent more than 350 monks chant to Amnyi Chungun (see, also, illustration, page 150, and text, page 162).
every crack and ledge. It was not unlike certain Colorado scenery.

After establishing camp, I went down the Great Gold Valley to the point where, narrowing down to a rocky gateway, the Ser Chen joins the Yellow River. Here I climbed up beside the stone gateway and, to my amazement, I saw the mighty stream, some 200 feet below, confined to a gorge no more than 80 yards wide.

Here again my American interpreter and I were the first of our race to look down upon this great river imprisoned in this deep gorge, for it may be said that the whole course of the Yellow River from south of Dzangar to and including the gorges north of Radja were absolutely unexplored and never before had been visited by white men.

It gave me a peculiar feeling in this lonely wilderness to be the first to look upon this mighty river flowing through hitherto unknown gorges. The ravine was choked with fallen timber, roots, tangled underbrush, and broken rocks which had fallen from the heights.

The gorges of the Yellow River at the mouth of Ser Chen Valley are not less than 3,000 feet in depth, but the high peaks forming the gorge were not visible from the point where we stood.

To celebrate this first view of these gorges we killed two eagles as natural-history specimens. They are now in the Museum at Harvard.

Going back to camp, we explored the Gold Valley upstream, or north. It changes to a deep gorge with sheer 1,000-
foot-high sandstone walls. Its floor is densely wooded with enormous century-old junipers. Into the walls of the gorge penetrate deep caves, from whose ceilings hang giant icicles like stalactites. Wild it all is, yet uninhabited; hence peaceful.

Flocks of Tibetan eared pheasants whirred from our path next day, as we marched on over recurring ridges and valleys toward Radja. Our trail at times ran along the rocky banks of the Yellow River. Once we startled a flock of wild blue sheep, with great curved horns. Up a dizzy chasm they fled, making spectacular and unbelievable leaps from one rock shelf to the next. Still talking about the sheep, we rode around a sharp point and there, in the valley of the Yellow River, lay Radja, our base from now on.

From my quarters in the Radja lamasonry, I could see the Yellow River, and on to the west the wooded slope of a mountain, and a trail leading into the land of the Ngoloks.

**THE RADJA BUDDHA ENJOYS A TIMEPIECE SYMPHONY**

I called on the local Buddha, of course. Without the aid of these holy men, no intruder from the outside world could last long among these fanatics. His reception room was a curiosity. From floor to ceiling, clocks and watches of every description and size were ticking away, each keeping its own time regardless of the actual hour. Clocks struck at various intervals—some in unison, others in quick succession. An old-style Swiss cuckoo added its raucous squawks to the chronometric cacophony. I gave him one more watch; also, a pair of snow glasses and an American 20-dollar goldpiece.

My interpreter explained the objects of our march and asked our host to help us. The Buddha said little himself, but instructed his steward to advise us.

The Rimong chief, most powerful of the Ngoloks, would probably rob and murder us, predicted the steward. Only recently this wild tribe had even robbed a Living Buddha, taking from him 40 horses and 400 sheep, as his party went over one of the Ngolok trails.
with our letters declined the job. In the end, the Buddha found a lama, either more courageous or more foolhardy than the rest, who was willing to act.

Besides our letters, we also sent presents to the chiefs. To get an answer, we figured, would require about two weeks—a foolish hope, we were to learn.

While waiting for an answer from the Ngolok chiefs I had an opportunity to study Radja and the gorges of the Yellow River to the north.

Few in the outside world know that Radja Gomba exists. Life here is unbelievably crude. On the hillside back of the lamasery, for example, are the huts of many hermit lamas, some even from the wild Ngoloks. Ceilings of these huts are so low that a man cannot stand erect in them; yet here these austere creatures spend their years.

Others live in caves in the near-by cliffs. Prayer, meditation, and abstinence are their lot. They certainly do abstain! In winter they live on barley flour; in summer their chief diet seems to be stewed nettles (see pages 148, 153).

"THE LIVING BUDDHA BUSINESS IS A POLITICAL SYSTEM"

The Radja Lamasery's drinking water is carried up from the river in huge wooden buckets. I rigged up a filter from kerosene tins to get part of the mud out of the yellow water, which was as thick as pea soup. This amused the lamas and stimulated the loquacity of our good-na-
tured old water-carrier. Not being a
native of the place, he commented freely
on the habits of the lamas at Radja.

The Living Buddha business, he said,
was a political or diplomatic system and
always worked out for the good of the
rich and influential. The local Buddha was
very rich; so was his steward; and when
“reincarnations” occurred, it seemed to him
that this “miracle” always happened just
as it might have been desired by the chief
Buddha. For example, when the daughter
of a powerful chief died, she was soon
afterward incarnated in the person of a
small boy, a nephew of the Buddha’s
steward—a business and political arrange-
ment agreeable to all concerned! When
one of the minor Buddhas of Radja died
he, too, was happily, conveniently, and
quickly reincarnated, this time in the per-
son of the steward’s brother!

I smiled and asked the water-carrier
how it happened that none of his children
was the reincarnation of some departed
Buddha. With a twinkle in his eye, he
remarked that it was because the sum of
all his worldly goods was two goats.

There is no such thing as a jail in
Radja, we were told. Lamas who steal,
or break other important laws, are tied

THE AUTHOR’S CAMP IN DAKHSA CANYON

Set among spruce and willow and viewed from a trail leading to Ngarkongma (a bluff
overlooking the Yellow River gorges), this camp stands at 10,146 feet above sea level. Dense
woods cling to the northern slopes, but on southern exposures slopes are bare, owing to earlier
melting of snows.
The daughter of the King of the Ngawa tribe appears in all her finery. The Butsang Ngolok Chief and His Wife

up and beaten; then, with duncecaps on their heads and strings of bones around their necks, and brooms in their girdles, they are driven from the monastery.

PRINTING IMAGES ON WATER

Walking along the river one day, I found a lama who seemed to be playing in the water. He had a board about two feet long with a string tied to it. He would let the board float away a bit, then pull it back. Two hours later when I returned he was still there, playing with that board. On the underside were five brass molds, such as are used in making mud bricks, decorated with numerous images of the Buddha. On investigation I found that he was printing images of the Buddha on the passing river. By doing so, he acquired merit. He occupied himself in this way for hours (see pp. 154-5).

I was invited by the chief Buddha to a picnic to celebrate the feast of Amnyi Chungun, the mountain god of Radja. My host rode ahead on a horse, followed by about five hundred lamas. They went up on the mountain, set up their tents, and improvised an altar whereon offerings of juniper twigs were burnt. Between prayers they ate all the usual unpalatable Tibetan delicacies and drank their strong tea from dirty cups.

After final prayers the Buddha left, riding a beautiful horse with its saddlecloth and trappings of gold brocade and sheltered by a big gilded umbrella. When he was safely out of sight, the lamas played hilarious games and frolicked to their hearts' content in a very childish manner.

Back in Radja a fair was under way. Many Ngoloks from the Hdzanggur tribe were camped on the Yellow River opposite the lamasery. Here a ferry of inflated goatskins supporting a raft of poles was in operation. These skins soon went flat. After each trip the Tibetans had to blow up each skin—excellent exercise for the lungs. As many as 12 people would ride on one of these flimsy rafts. Horses and cattle, of course, had to swim, and often, as I later learned to my sorrow, working animals are drowned in this swift stream (see, also, page 164).

I crossed over to the Ngolok camp to see what these almost unknown wild people were like. Though very suspicious of us,
they showed the greatest curiosity about our appearance and clothing. My interpreter heard one of them say: "I'll now we have never seen men like you. What are you doing here?"

POCKETS AND BUTTONS AMAZE THE NGOLOKS

They formed a circle about me, feeling my clothes. My pockets in particular amused them. "They are casings for the hands," they said. My shoes also aroused admiration and the Ngołoks wondered how so many stitches could be taken in leather. Buttons and buttonholes amused them. They followed me about, shaking their heads in bewilderment.

I pointed my camera at them and tried to explain its use, but they ran away. I did manage to photograph one wild fellow, however. His abdomen was covered with straight scars, made when he had held burning rags against his body to cure his stomach ache. These scars were so evenly placed that they looked like tattoo-marks. Other Ngołoks had scars on wrists and hands, marks of fiery ordeals to cure rheumatism (see page 166).

After our arrival at Radja two Moslem traders appeared and bartered for 88 yaks from the Ngołoks. Radja ferrymen, with certain confederates, tried to steal these yaks from the traders. During the night, at their third attempt, the traders fired and killed one of the would-be thieves, then fled across the river to the lamasery.

THE WIFE OF A BUTSANG NGOLOK CHIEF WEARS A GOWN OF GORGEOUS DECORATION

Suspended from her hair is a long strip of red cloth, to which are fastened large opaque, canary-yellow amber beads and long pieces of red coral. Immediately below her hair are rows of turquoise and silver buttons. From each side of her waist hang leather strips decorated with silver and terminating in disks of ivory. The amber is bought at the rate of ten ounces of silver for one ounce of amber, which comes from the Baikal region, in Siberia.

Next morning the river bank opposite us looked like a war camp. All the friends and kin of the dead tribesman had gathered to avenge his death. Their first act was to drive away the 88 yaks belonging to the Moslem traders. Others got ready to cross the river to catch the two now frightened traders, who, fearing for their lives, sent over some money, horses, and a rifle as a peace offering to the family of the man they had killed.
Skin rafts on the Yellow River at Radja

Such craft consist of from six to twelve inflated goat or sheepkins tied to a few sticks. To cross the swiftly flowing river on one of these rafts is a rather precarious undertaking. Here the author's party has just been ferried across on two rafts tied together (see page 162).

Apparently satisfied with this easy haul of yaks, money, and horses, the tribesmen shouldered their dead comrade and made off.

Although the two Moslems appealed to the chief Buddha, he was powerless. The guilty clan paid not the slightest attention to him; in fact, a few nights later, they stole some of his own horses and sheep.

We heard that one Ngolok raiding party, the winter before our arrival, had crossed the ice on the frozen river, robbed and looted at will, and returned unmolested to its camp.

The Buddha Sends out a "Cursing Expedition"

The Ngoloks are no respecters of persons. One day, while awaiting answers from our messages to them, the Buddha suddenly informed me that we should start at once on our final dash. News had just reached him that a member of his monastery, returning from the Ngoloks, had been robbed and killed. In punishment the lama council was sending a "cursing expedition." Sixty monks were to go to the tribe that had done the killing and put the monastery's official curse on it. By joining this cursing party, the Buddha believed I could easily get into the forbidden country.

I had no qualms about going on a cursing party, but I could not get my yaks ready in time, so I was left behind. Later, I learned the cursees met the cursers halfway and paid indemnity to escape the threatened evil spell. Fearless as the Ngoloks are, they are also very superstitions.

While still waiting for an answer to my letter to the chiefs, I went on a side trip to explore the gorges of the Yellow River. With an old guide from the Cartse tribe and 15 yaks, I followed a trail which crossed at right angles many deep ravines coming down to the Yellow River from its north bank. An odd physiographic feature of these ravines and lateral valleys is that their formation seems reversed. Toward their heads they are often a mile wide and are bare of vegetation;
TRAVELING HDZANGGUR NGGOLS, ON THE WESTERN BANK OF THE YELLOW RIVER

Back of the skin bags are two rifles, with the indispensable forks on which the weapons are rested when discharged (see, also, illustration, page 142).

Further downstream they merge into grasslands, and at their mouths, where they debouch into the Yellow River, they are merely rocky gates a few yards wide.

THROUGH AN EMPTY WORLD

Uphill and down, through canyons and over passes with odd, gurgling names, we pushed our toiling way through an empty world. Not a human being appeared anywhere in that forsaken region.

Then, atop the Mokhrur Nira (Pass), at an elevation of 12,800 feet, I got my first view of the Amnyi Machen. All I saw, however, was one dome-shaped mass of purest white. Far off to the south a long snow-covered range extended from east to west. South of it lies Ngolok land.

From the Mokhrur Nira we climbed a peak to the right of the pass, to an elevation of 13,220 feet, from which we gained a much better view of the Amnyi Machen. To the north its peaks decrease in height more rapidly than to the south, the whole range appearing as one large mountain mass. It does not extend down the knee of the Yellow River, as most maps indicate, but is a single mountain mass.

There are several lower ranges east of the Amnyi Machen more or less parallel to it. From the Mokhrur Pass we now descended into a narrow, rhododendron-covered, swampy valley which led into a canyon, where we spent the night at an elevation of more than 11,000 feet. The rock, as in most other places in the Yellow River gorges, is shale and schist.

From here we climbed to a 11,700-foot bluff and took photographs west-northwest of the Yellow River, which flowed about 2,000 feet below in a terrific gorge, with vertical walls furrowed by landslides. Then we descended directly through forest into Dakhsa Canyon, a walk of more than two days. At the very foot of the trail is a small grassy space, the only available camping ground. We spent four days in Dakhsa Canyon, exploring the forests by following up the stream bed over bowlders and fallen logs (see pages 159, 161).

On June 2, a morning with a deep blue sky and cirrus clouds, we climbed to a
A NGOLOK OF THE HDZANGGUR TRIBE IN TIBET

He lives about three days' journey west of the Yellow River from Radja. The tattoo-like marks on his abdomen are not there for ornament, but were burnt in with flaming bits of rags to cure indigestion (see text, page 163). Around his neck he wears charms.

High bluff, Ngarkigongma, which permitted a magnificent view of the Yellow River gorges. I took several photographs downstream, numerous rapids appearing in the distance. To the north the mountains became higher and the Yellow River gorges consequently deeper.

PRIMITIVE MAN'S CONCEPTION OF AIRPLANES

On the climb to the top of Ngarkigongma we took our nomad yak driver along. As we looked across the peaks and gorges, we remarked to him that with an airplane one could reach the Amnyi Machen undoubtedly the first of our race to plant foot. And again, from this region, we could see the towering Amnyi Machen.

Disappointment was ours on our return to Radja. Neither the escorts nor the yaks we had bargained for were ready. In fact, we were bluntly told nobody would go with us. A warning had come from the wild Ngoloks that no one should aid us to get into their country, and the people were afraid.

In despair, I threatened the lamassery people. Unless we were immediately provided with escort and animals I would ask aid of the Sining Moslems, whom they
so much feared. This brought the lama council quickly to
time.

We could cross the Yellow River at Radja, they advised: go first to the camps of the Tawu clan, and from there it would be only one day to Amnyi Machen. To be able to move quickly in case of attack, we decided to use only horses and take an irreducible minimum of food, tents, and clothes.

The chief of the Radja council said he would send word at once to the Jazza clan’s camp, west of the Yellow River, and I agreed to hire the male members of that clan to escort us to the mountain. The lamas, however, could not guarantee our safety, and should the Ngoloks or other robbers attack us they would not be responsible for our lives and property. To this I agreed. I had come to the conclusion that to work at the Amnyi Machen peacefully would be out of the question. It is feasible to get there, but to stay and work is another story. It would mean either keeping a large, well-armed party for one’s protection or else depending upon the friendly cooperation of all the Ngoloks.

**SPIES INFORM NGOLOKS OF THE EXPEDITION’S PLANS.**

In the meantime, while making preparation for the hazardous journey, some spies informed the Ngoloks of our plans. Most likely it was the ferrymen and the old water-carrier (see pages 160-1). His brother-in-law (a Butsang Ngolok chief) had already sworn that if ever we should come anywhere near his encampment it would be the end of us. The Radja lamas, too, had warned us not to go. They said the Hdzanggur Ngoloks were waiting for us in the Gur Zhung Valley. One tribesman, in fact, came boldly into our compound and in a bluffling voice said, “You had better not go, for all the Ngoloks are aroused and are awaiting you to rob and perhaps murder you.”

Notwithstanding these threats, we laid our plans. The chief of the Jazza clan
A SEA OF MOUNTAINS CULMINATES IN THE PEAKS OF AMNYI MACHEN

A view of bare mountain regions, taken from Woti La (Pass), at an elevation of 14,680 feet. The author was on his way to the Jupar Range, eighteen days' journey from Radja, when this photograph was made.
THE BA VALLEY OF TIBET, FROM ITS SOUTHERN RIM IN THE BA PLAIN; ELEVATION, 10,400 FEET

The willow-lined Ba stream flows through eroded loess and gravel slopes. On the terraces in the valley (center and left) are the only Tibetan villages in this sea of grass. The inhabitants are called "the people living under the ground." The Jupar Range, with its bare southern slopes, is visible above the Ba Plain,
BACK FROM A SUCCESSFUL DUCK HUNT

Two of the author's happy Nashi boys enjoyed a short excursion into the Ba Valley, notorious for its robber tribe, the Shahrang.

came to discuss terms regarding our trip. We were to make a large encampment in three days, and there engage Kangsar Ngoloks to escort us farther. He also said if we did not stay too long at the Amnyi Machen there would probably be no danger.

July 11 was set for our departure. Gomba, the Jazza chief (see p. 172), came early, but on that morning we had an accident while crossing the Yellow River. One horse was drowned. I pretended to be discouraged and announced that I would either not go at all or else postpone the journey. I had, however, a plan to mislead everyone, even my own entourage. I told Gomba to come next day and bring what silver he had left from the amount advanced him, as I had decided to return to Labrang. Then we recrossed the Yellow River to Radja and announced that we would return to Labrang.

To give our plan the appearance of truth, I ostentatiously sent two men and our old yak driver to the Gartse tribe to engage cattle to take us to Labrang.

Early the next day Gomba came with 50 taels of silver, and bewailed the fact that I had given up the journey to the mountain. But I took him aside and told him to keep the money and say nothing. "Fetch the rafts and load them with our belongings," I said. "This very day I shall follow you to your camp and on to the Amnyi Machen, as agreed."

The water-carrier, whom I suspected as a spy, we sent on an errand to the lamasery.

We took several horses instead of yaks and loaded them lightly, so as to make quick progress. All had assembled on the river bank. To expedite the crossing, Gomba's tribesmen took off their clothes and stuffed them into goatskins taken from the inflated rafts; then they fastened the skins around their bodies, while each drove a horse into the river and, taking hold of the horse's tail, swam across, or rather let the horse pull him to the other bank.

We assembled our loads and when all was ready followed downstream on the muddy bank to the little valley of Ulan. This we ascended. As we turned into the ravine I beheld an ominous black-blue sky
and knew that we were in for a terrific storm. Gomba suggested that we wait until it had passed; so I found shelter in a dry brook bed, under an overhanging ledge of rock. The storm broke, but soon we all went on in spite of rain, lightning, and deafening peals of thunder. The stream bed had become a red torrent, which we had to cross and recross many times, while the steep hillside had become unscalable red clay mudslides.

Eventually we emerged from the storm at an 11,650-foot pass. From here we had a beautiful view westward over a vast rolling land. We descended into the Sher Lung Valley; thence to a stream which flows in a narrow canyon to the Yellow River. The water was a deep red, but the fording was not difficult. We continued up a lateral valley skirting small ravines, and, after crossing a steep spur, arrived at the encampment of the Jazza clan just in time to pitch our camp before dark.

THE EXPEDITION GOES FORTH INTO THE UNKNOWN

This was the first time any white man had ever camped west of the Yellow River and east of the Amnyi Machen. We were in absolutely unknown territory, unknown from every standpoint. After a sleepless night, owing to the barking of the nomad dogs, we arose, got our escort together, and sallied forth.

Our first objective was Amnyi Druggu, a high mountain facing the snow peaks, from which vantage point we hoped to photograph the Amnyi Machen as a whole. But across the Gur Zhung Valley a still better view can be had than from Amnyi Druggu. The trail led southwest on the bare grassy slopes, with not a tree visible anywhere (see map, page 138).

To our right extended cliffs of purplish-red conglomerate, a continuation of the Radja cliffs, through which the Yellow River has cut its way. These cliffs culminate beyond the Jazza encampment in a high red bluff. This prominent feature of the landscape, crowned by juniper trees, is called Amnyi Geto, the mountain god of the Jazza clan. At its base, on the left
of the trail, is an obo, a pile of sticks and rags and rocks. Here the clan burns its incense offering to Geto. The elevation at the obo is 11,800 feet.

We now went west, still over grassy hills, up and down, at an elevation of more than 12,000 feet; then northwest, leaving to our left a deep valley with sunken terraces, one above the other. Then we went down into Drukh Nang, or Dragon Valley, which leads to another pass, the Drukh Gi Nira, at an elevation of 14,250 feet. It is on the border of the Jazza territory. Ascent and descent were very difficult, because of the water-logged condition of the ground, which resembled one vast bog.

We were now in the territory of the Yonzhi tribe, which extends to the Cheb Chu and Yellow rivers. Poor as the region east of the Yellow River is in game (except for blue sheep, gazelles, and wolves), game to the west, in the Amnyi Machen mountain system, is most abundant. It is difficult to see what prevents these animals from migrating over the Yellow River to the east, when in winter that stream is one sheet of ice.

At the summit of the pass we espied three big sheep, with horns forming tremendous spirals, which did not extend laterally, but formed one huge frontal spiral reaching nearly to the ground. The nomads call these sheep nyen. They are undoubtedly related to the Ovis Poli. The Jazza people told us, and I merely repeat it without comment, that the old rams often die of starvation when their horns grow so big that the animals can no longer reach the grass.

The whole region between the Yellow River and Amnyi Machen is one great zoological garden. Wherever I looked I saw wild animals grazing contentedly. There were various deer, wapiti, and many other animals unknown to me.

In order not to meet too soon with the Yonzhi tribe, we decided to camp below the pass, in a small lateral valley, above juniper forest.

After a peaceful night we descended the Hcha Chen Valley. A few miles be-
low our camp it was filled with magnificent juniper forest. While I stopped to photograph, Gomba and my American interpreter went up a small valley to our right, where the Yonzhi chief had had his encampment. There was, however, no sign of any tent. Nomadlike, they had moved again.

The scenery became more and more beautiful as we descended. The little meadows, clearings in the juniper forest, were full of flowers—blue poppies, yellow primulas, and others—out in all their glory. Where the valley narrows into a defile, we found a trail leading through virgin juniper forest.

PRAYERS HUNG ON TREES

It was a glorious day. From the branches of trees there hung, suspended on yak-hair rope, many mutton shoulder blades inscribed with the sacred formula, "Om mani padme hum." These were hung so low that passers-by were bound to touch them and thus, by setting them in motion, say the prayers written on them (see page 175).

After crossing a wooded spur over a steep, hard trail, we descended into a lateral valley forested with spruce on the northern slopes and juniper on the southern. Here we found the tents of the Yonzhi tribe. The people were astonished at sight of our party. They joked with Gomba, and one asked, "Why this array of arms and force when visiting our territory?"

We continued up the valley to the very foot of Amnyi Drugdu, the mountain god of the Yonzhi tribe. The last few tents we passed were cursed by some plague, the nomads said. The inmates lay dying outside, covered with yak-hair rugs.

Gomba pulled me aside and motioned me not to breathe while passing the dying nomads. He gave them a wide berth. I assumed it was relapsing fever and doubted that it was due to plague.

We pitched camp at 12,500 feet elevation, at the foot of the trail which led to Amnyi Drugdu. As we had arrived early in the afternoon, I decided to climb the
A NASHI BOY WITH THE HEAD OF A BLUE SHEEP

These rare animals are found among the cliffs and gorges of the Yellow River in the vicinity of Radja (see page 159).

mountain for the view. It was a stiff job, after a hard day's ride, but we reached the top. Prayer flags decorated the summit, which we determined to be 14,450 feet.

Amnyi Machen's peaks were hidden in clouds. We had only occasional glimpses of the vast snow fields; yet the scenery was superb. In front lay the valley of the Cheb Chu, which joins the Yellow River below Hcha Chen Valley. To the left a deep valley denoted the Yonkoh; to the right was the Yikokh, which with the Domkoh forms the Cheb Chu Valley. I saw no trees whatsoever higher up toward the Amnyi Machen. The ranges were bare, rocky scree or grass-covered. The vegetation on Mount Druggu consisted only

of alpines of various species, mainly umbellifers, Parnassia, anemones, Pedicularis, blue and red poppies (Mecanopsis), legumes, and many Composite.

We lingered a considerable time at the summit, enjoying the beauty of a setting sun over the huge mass of the Amnyi Machen.

THE GLORY OF THE AMNYI MACHEN

Next morning we climbed again to the summit of Amnyi Druggu, which is in the very center of a spur facing the snowy peaks. Before us lay, in all its whiteness and purity, the glory of Amnyi Machen. Not a cloud was in the sky. We could photograph to our heart's content. I also took pictures looking east over the deep depression in which flowed the Yellow River, and north toward the Jupar Range, which we had previously explored (see text, page 166). Below us, in the valleys, camped the Ngoloks, apparently unaware of our presence.

While on the peak I observed a nomad climbing Amnyi Druggu from the west. Our presence did not disturb him in the least. He came to pay his devotion to the god Amnyi Machen by lighting juniper branches near an obo (see pages 171-2). He knelt down and bowed deeply three times toward the peaks, his forehead touching the ground.

From our camp at the foot of Amnyi Druggu we made excursions to the gorges of the Yellow River, photographing up and downstream from a bluff 1,500 feet above the river. We could see plainly
Ngarkigomgma above Dakhso Canyon, whence we had photographed downstream (see text, page 166). The Yellow River, flowing here in bare canyons, describes long gentle curves as one looks south, but to the northwest the river can be seen only for a short distance, because of the steepness of the canyon and its sharp turns. We retraced our steps up the Hcha Chen Valley, camping for the night in the juniper forest. Our rounds made themselves comfortable in a shallow cave. To do some hunting, we ascended farther up the Hcha Chen, to the mouth of a lateral valley.

ONLY TWO SEASONS—SUMMER AND WINTER

From a botanical, or rather dendrological, standpoint, the region was disappointing. The altitudes were too high to permit tree growth. Even the valley floors around the Amnyi Machen reach a height of more than 15,000 feet.

Of alpine plants we found many species; but the flora is not nearly so rich as that farther south. It must be remembered that here there is neither spring nor autumn; only summer and winter—and summer is short. Even in July, snowstorms are not uncommon. The ice in the stream beds of the valleys around Amnyi Machen apparently never melts completely; on our journey in the latter part of July, we found ice three feet thick in many places. All this naturally has its effect on the flora of the region.

MUTTON SHOULDER BLADES ARE TIED TO A YAK-HAIR ROPE AND FASTENED TO BRANCHES OF TREES, USUALLY OVER A TRAIL.

These bones are inscribed with the sacred formula, “Om mani padme hum.” As they are suspended over the path, the traveler is bound to push them aside when passing; and when he sets them in motion he says all the prayers written on them for the good of the party who hung them up.

One of the handsomest alpine plants we saw was a large pink to mauve and blue-flowered crucifer of a most delicate fragrance, suggestive of vanilla. There were apparently two species. They grew on alpine meadows as well as among rocks, but never lower than 13,000 feet.

In the upper Hcha Chen we literally ran into wapiti, deer, and musk deer. While the men went hunting, I climbed to a rocky peak above our camp and obtained a glorious view, especially of the great pyramid of the Amnyi Machen, the base of which
THE AMNYI MACHEN, SEEN FROM SHACHU YIMKAR AFTER CLOUDS HAVE GATHERED

"I shouted for joy as I beheld the majestic peaks of one of the grandest mountain ranges of all Asia." The central snow-capped peak towers to a height of more than 38,000 feet (see text, page 185).
A HORSESHOE BEND IN THE YELLOW RIVER NEAR THE MOUTH OF THE JUPAR NANG

The rocks forming the river bank are of a deep grayish-blue color.
A CAMP OF THE RUNGWO NOMADS IN THE GRASS LANDS, ON THE BANKS OF THE HTSE CHU, AT AN ELEVATION OF 12,050 FEET

The tents are arranged in a circle and sheep, yaks, and horses are herded overnight in the center of the camp. Tibetan mastiffs are kept among the tents to warn the camp of approaching robbers. It is early morn and the sheep are being led out to graze. In the distance is a large white tent, which marks the camp of a living Buddha who prays for the nomads.
A GROUP OF TIBETAN NOMADS, WITH THEIR YAK-HAIR TENTS, SHEEP, AND PONIES, IN THE GRASS LANDS EAST OF THE KOKO NOR

Most of the women of this family braid their hair in 108 tiny pigtails (see, also, pages 140, 160, and 183). They are richly dressed, to the envy of women whose men own fewer flocks of sheep. These nomads stared in wonder at the white visitor's tables, chairs, and tents—marvels they had never seen before.
MAKING CAMP ON THE GRASS-LANDS AT AN ELEVATION OF 11,800 FEET

On the return from the Amnyi Machen adventure, the author and his party pitched their tents on this plain prior to negotiating the 13,400-foot Wanchen Nira (Pass).
A TEA CARAVAN HALTED IN THE SONG CHU GRASS LANDS WEST OF LABRANG.

The caravan consisted of 800 yaks and had been 20 days en route from Sungpan, in northwest Szechwan. The tea, of the poorest grade, was composed of large leaves and twigs. It was grown in the Min River Valley, near Kwanhsien, in Szechwan, ten days south of Sungpan. In Kwanhsien this tea sells for $1.50 a bale of 120 pounds, but in the grasslands the price goes to $30 and $40 a bale.
THE TENTS OF A NOMAD TRIBE ARRANGED IN A CIRCLE

The author encountered this summer camp four days' journey east of Radja, on his return journey to Labrang.

MAKING CAMP IN HIGH ALTITUDES CALLED FOR MAXIMUM PHYSICAL FORTITUDE AND POWERS OF ENDURANCE

The last of the author's caravan of 60 yaks reaches the Sokwo Arik nomad encampment, at an elevation of 11,450 feet, in the grass lands west of Labrang.
A NOMAD WOMAN OF THE KOKO NOR REGION

She wears her hair in 108 plaits in honor of the 108 volumes of the Tibetan classic, the Kandjur (see "Life Among the Lamas of Choni," by Joseph F. Rock, in the National Geographic Magazine for November, 1928).

HER ORNAMENTS ARE SUPPORTED BY HER 108 Pigtails

Most of the decorations of a Tibetan nomad woman are worn on her back. The bowl-like pieces of silver are fastened to strips of red cloth. The picture was taken en route to Rako, in the grasslands east of the Koko Nor.
THE GOD AMNYI MACHEN, AS TIBETANS CONCEIVE HIM TO BE

This painting, in the vestibule of the chanting hall in Atunze Monastery, northwest Yūnman, represents the god on a white horse. Since he dwells in the snow peaks, those in the background represent the Amnyi Machen Range, with a sun and rainbow (left) and a moon (right). Below him is the Goddess of Springs, with snakes in her hair, on a dragon. The woman riding a deer on a cloud (upper right) is the god’s wife. Below her is a guardian god of Amnyi Machen, who is supposed to ride a cow. From top to bottom, on the left, are two lamas; a god known as Tangla and usually pictured as riding a dragon; the god Dentram, on a tiger, and below him the Stone-Mountain god, Tsan. All Tibetans worship Amnyi Machen; every monastery has either a picture or image of him. Amnyi means “old man” and corresponds to our “saint.” Ma means “peacock” and chen “great.”

was shrouded in billowy clouds. To linger was impossible, as a storm threatened. I descended rapidly to camp, arriving just as the storm broke. When I awoke the next morning, the whole landscape had undergone a change. Not a vestige of green was visible. All lay buried in a deep mantle of snow.

Clouds were hanging heavily over the grass and the spurs around us. We broke camp early. The Tibetans had slept outside without a tent or shelter, save their felt coats, in which they rolled up like cats. Yet they were cheerful and happy, as if they had slept in feather beds. When their tea was ready, one man would
take a large ladle, dip it into the pot, and, amid the chanting of prayers, throw the tea into the air as an offering to the mountain gods. Then all would squat down and eat their frugal meal of tea, butter, and barley flour.

From our Hicha Chen Valley camp we climbed the opposite valley wall, deeply covered with snow. Red and blue poppies, bright, fresh, and unharmed, looked happily out of their bed of snow. They are as hardy as the people of this region.

The higher we climbed, the boggier became the ground. We crossed a ridge at 14,100 feet elevation as the clouds began to disappear in spots, and the sun peeped faintly through the mist, necessitating snow glasses as protection against snow blindness. We found ourselves now in the Tarang Valley. Here the boys went hunting, and brought back a male musk deer, a broiled steak of which was a welcome addition to our scanty bill of fare.

Early the following day we decided to climb Shachü Yimkar in order to obtain still better views of the Amnyi Machen. The gods again were favorable to us, for the snowstorm had cleared the atmosphere and a cloudless sky greeted us. The slopes and the summit of Shachü Yimkar were a sea of loose slate. Tiny rosettes of Sannsureas, with woolly heads resembling a drum major’s shako, grew among the slate slabs.

I shouted for joy as I beheld the majestic peaks of one of the grandest mountain ranges of all Asia. We stood at an elevation of nearly 16,000 feet, yet in the distance rose still higher peaks—yet another 12,000 feet of snow and ice! Undoubtedly the dome Drandel Rung Shukh is the highest part, although the great pyramid Shenrezig is a close second and more imposing. The third in size and the central peak is Amnyi Machen, whence the range derives its name. In it the Tibetans believe Amnyi Machen resides. Not being supplied with a theodolite, I could not take the actual height; but from other observations I came to the conclusion that the Amnyi Machen towers more than 28,000 feet (see page 176).

With difficulty I tore myself from that sublime view—a view of the eastern massif of the mountain from west of the Yellow River which no other foreigners had ever had. I remained for some time alone on that isolated summit, lost in reverie and easily comprehending why the Tibetans should worship these snowy peaks as emblems of purity.

As this issue of the National Geographic Magazine goes to press, a letter, seven weeks in transit, comes from Dr. Rock, announcing his safe arrival in Likiang, Yunnan Province, China, after a thrilling escape from Yungning, where his party had been imperiled by bandits for many days. Retiring by stealth from Yungning, Dr. Rock describes how he and his followers crossed the Yangtze: “It took us two days to make the crossing with the assistance of 22 natives, who worked like Trojans from early morning until after sunset, stark naked, each with only an inflated goatskin tied to his stomach. They would plunge into the rushing river and push us across, as we each sat upon two inflated goatskins. Three men would pull and two would push, and yet we were carried downstream for more than a mile. As we came in contact with a whirlpool we were spun about as on a merry-go-round. All the natural-color photographic plates, cameras, trunks, botanical and ornithological specimens, and the mules and horses of our caravan were finally set across, with the loss of but one mule.”

It is hoped that Dr. Rock, having completed his three years of exploration along the China-Tibet border for the National Geographic Society, will be able to return to America late this spring. Accounts of his experiences and of his notable photographic surveys of mountains hitherto unknown to the outside world will appear in subsequent issues of the National Geographic Magazine.

The Editor.
ALMOST EVERY SORT OF PRODUCE FLOODS THE MARKET

Nature is bountiful in Sumatra, and the rich soil yields abundantly of virtually anything that is planted. The shopper at Fort de Kock has a bewildering variety of fruits and vegetables from which to choose (see text, page 194).
"WONDERLIJK!" exclaimed a genial Dutch resident of Batavia, floundering for descriptive adjectives, as he waxed enthusiastic and almost inarticulate over Sumatra. "You must see the Padangsche Bovenlanden (Padang Highlands) and Toba Meer."

Following his advice, we sailed at noon-time from Tandjoeng Priok, the harbor of Batavia, on a small west-coast Sumatran steamer named after a certain somebody who has helped make Holland's colonial history. Besides a few business men and half a dozen travelers, it carried a dockful of Javanese men and women laborers for the Sumatran tea, rubber, and tobacco estates.

A noisy group crowded the pier to wish farewell to friends who lined the steamer rail. With shouts and excited gestures pill-box hats were tossed out toward the departing steamer, but a surge from the propellers sent them bobbing back toward the dock—and we were off for Padang.

The first European to include Sumatra in his travel itinirary, so an early historical chronicle testifies, was none other than that Venetian prince of wanderers, Marco Polo.* Other early records direct attention to the visit of Ludovico di Varthema, of Bologna, who halted his caravels on the Sumatran coast during a Far Eastern cruise in 1505.

In 1590, Cornelius Houtman, after locating the new Indian trade route for the Dutch around the Cape of Good Hope, ventured out to north Sumatra, where he lost his life at the hands of the Achinese. He had taken the initial step in one of the Netherlands' most expensive and hard-fought colonial enterprises.

Sumatra, the bounteous but unfriendly spice land of these early voyagers, is only slightly smaller than the aggregate areas of our nine New England and Middle Atlantic States and, longitudinally speaking, is at the world's end from Washington, D. C. It is furthermore some thir-teen times larger than its Netherlands guardian, but has a somewhat smaller population (see, also, map, page 189).

Sprawling at an angle across the Equator, with the tropical sunshine and monsoon rains spilling over its rich volcanic soil, Sumatra is generously favored by indulgent Nature. As yet, however, its manifold agricultural and mineral resources have been exploited to only a small fraction of those of her sister island, Java.*

SILENT KRAKATAU REVIVES TRAGIC MEMORIES

By eventide the Java Sea had slipped astern and our steamer nosed westward through the placid waters of the island-studded Sunda Strait and into a flaming golden sunset. Off to port lay the island of Krakatau, bathed in evening splendor, silent for the time and innocent in appearance. Yet Krakatau evokes the memory of the overwhelming tragedy wrought by its violent eruption in the summer of 1883, when thousands of lives were swallowed up by the devastating tidal wave that swept the shores of the surrounding regions. At that time half of the island disappeared beneath the sea, and the fine volcanic ash thrown into the upper air currents continued to color the sunsets with purple-red hues for nearly two years.

In the early months of 1928 the volcano again awakened, rumbled and hurled rock and boiling mud, together with heavy clouds of steam, from an under-water fissure to a height of hundreds of feet. Repeated disturbances have followed. People living in the once-destroyed regions are justly nervous over its renewed activity. Observers are, therefore, carefully following its temperamental movements in order to broadcast a warning should it show signs of increasing activity.

As we moved on, the orange-red sunlight flared higher on the clouds and gradually died out behind the Sumatran hills, taking with it the gold-tinged purples on the island peaks. Krakatau became quite sullen.

BRITISH SOLDIERS BUILT THE OLD CASTLE NOW USED AS BARRACKS AT BENKOELEN

More than a hundred years ago Sir Stamford Raffles established headquarters at this place, and for a time it was a lively trading center. With the development of Singapore, however, it lost its commercial importance.

EMMAREVEN IS THE SHIPPING POINT FOR OMBILIN COAL

Much of the fuel used in this part of the Far East goes out from this busy port on the west coast of Sumatra. The wharves are connected by an excellent railroad with the extensive mines in the highlands (see text, page 189).
Benkoeien, the chief halting place along the coast below Padang, had its beginning in 1714, when the English established Fort Marlborough here. After the rise of Singapore, the post was ceded to the Dutch in 1824. The old fort still stands, in a partly ruined state, as a reminder of early English supremacy.

The Government is now threading roads through the south Sumatran hills and jungles to connect with a single main railway, but large regions are still undeveloped. Petroleum, however, has been the touch of Midas in the districts near Palembang, on the east side, and two large companies carry on extensive operations there.

Cruising north toward Padang, our ship passed among numerous delightful islets, green-capped and wreathed with slender palms, and finally swung into the lovely Koninginne Bay (now Emmahaven). Verdant vine-clad hills, fresh from a tropic shower, rose on three sides to inclose the blue-green water, while several white-sailed fishing boats, equipped with double outriggers, darted across our prow toward a village of bamboo shacks in the shadows of the bay.

Steamers tie up at the docks of Emmahaven; Padang itself is some 20 minutes by motor car or train around the hills.

*See, also, "By Motor Through the East Coast and Batak Highlands of Sumatra," by Melvin A. Hall, in the National Geographic Magazine for January, 1920.

Puffing switch engines shunt carloads of coal along the wharves and an overhead railway extends out over the water, so that vessels can refuel directly from the dump cars. The coal comes from the extensive Government mines of Ombilin, up in the Padang Highlands.

AN ALTITUINAL JOURNEY OF DELIGHTFUL SURPRISES

The 54-mile train or motor ride to Fort de Kock, in the Padang Highlands, is an
EMMAHAVEN FISHERMEN ARE WELL PROTECTED FROM SUN AND RAIN

altitude journey filled with delightful surprises. The passenger trains do not elicit much enthusiasm from one accustomed to the excellent service of the State railways in Java, but one must recall that this line was built primarily to open the coal territory.

About half of the way the railway and motor road run through a coconut plantation district, with a few half-hidden villages, where the odor of copra hangs heavily in the air. In the succeeding miles the ascent is rapid and the engine is shuttled around to the rear of the train, so that it pushes the cars on a cogged line nearly all the rest of the way up the 3,000-foot climb. We were thus able to stand on the narrow platform on the front coach and enjoy "observation" privileges up the Anai Kloof, a beautiful defile.

As the train wound about in sharp curves between the steep hills which closed in on either side, the scenery became a display of luxuriant tropical foliage. Large trees and thick twining vines mantled the precipitous cliffs. We skirted along the narrow cut on the mountain side and crossed several steel bridges which spanned the river that rushed down through the rocky pass.

At one sharp bend a waterfall broke over the ledge of a high, vertical wall of rock and came plunging down into a jagged basin at the very edge of the railway track. It then cascaded down a ravine to join the river.

The train climbed slowly through the Kloof and at last reached the village of Padang Pandjang, between the two volcanic cones of Marapi and Singgalang, which rise more than 9,000 feet. As usual, everything was dripping from a late afternoon rain. This district enjoys the reputation of having one of the largest annual rainfalls in the Dutch East Indies.

At Padang Pandjang one branch of the railway turns southeast into the coal territory. Several years ago, when Marapi erupted, this village was partly destroyed and it has not been entirely rebuilt. One often wonders why the Sumatrans build their houses on the very slopes of the volcanoes, where they are in constant danger; perhaps, like the residents behind our Mississippi dikes, they know that the soil is
REFRESHMENT VENDORS THRO'G SUMATRA'S RAILWAY STATIONS

A kind of sour mandarin, the juice of which makes an excellent drink, is offered to passengers journeying from Fort de Kock to Padang. The train service is surprisingly good (see text, page 189).

NO MALADY BAFFLES THE "DOCTOR" AT FORT DE KOCK

Out of shells, bird beaks, claws, teeth, horn, dirty wood—all smeared with black grease—this confident practitioner compounds "cures" for all ills. What self-respecting ache could withstand such treatment?
MEN ARE A NEGLIGIBLE MINORITY IN THIS WOMEN'S WORLD

Only a motion picture in color could convey an idea of the brilliance of the scene at Fort de Kock on market day (see, also, Color Plates I, VII, IX, XV, and XVI).
**NET TENDERS DO IMPORTANT WORK IN SUMATRAN FISHING**

These boys wade out into the shallows near the shore, set the snares, and draw them tight after the canoe-men drive the golden carp into them.

**THE MEDICINE MAN'S STAFF BEARS HIS TRIBAL EMBLEM**

Among the Karo Bataks the carved figure of a man on a horse has special significance (see text, page 216).
rich and are ever hoping that each disaster may be the last.

On the final stage to Fort de Kock, after leaving Padang Pandjang and just before crossing the 3,000-foot saddle between the two mountains, we caught a splendid sunset view of the lovely blue waters of Lake Singkarak, nesting between the hills. This lake is one of the scenic spots of the highlands and has been aptly compared with the lakes of Italy.

Scattered around in the many clumps of coconut palms that dotted the landscape were little groups of houses having peculiar, upturned, hornlike gable ends. This characteristic roof construction is in accord with the family customs of the Menangkabau people of the highlands. Unfortunately, much of the picturesque-ness is lost because glaring corrugated tin roofs have largely replaced the native thatch.

**WOMEN RULE THE HOMES IN THE HIGHLANDS**

In the Padang Highlands the women are rulers of the household and control both the possessions and the children. The husbands, free from such responsibility, help work the family rice fields, and they are skillful craftsmen in both wood and metal. Many of the houses exhibit unique artistry in the carved designs on the wooden walls.

Possessions accumulated by men pass to their sisters rather than to their wives.

The day following our arrival at Fort de Kock was market day. By sunrise hundreds of people, mostly women, were filing in stately parade into the pasar, or market, with huge bales and baskets of produce on their heads. Every road leading into the city was a colorful pageant of country folk arriving in their gayest holiday attire. Market days in Sumatra are more than occasions for mere bartering and selling; they are social events as well. Had Marco Polo visited a native passar in the Padang Highlands on his Sumatran trip, he would undoubtedly have written a glowing report about the island.

We walked out to the Karbouwengat, or Water Buffalo Gorge, just beyond the city, to see that remarkable ravine, which was formed ages ago by a river running down past the bases of Marapi and Singgalang. The two walls of gray sandstone are tinged here and there with red, and the narrow valley is now checkered with rice fields. Far away we could see an endless line of market-goers marching down the trail from the bluff, fording the shrunkett river, and following the curving roadway that crossed the valley and zigzagged up through an opening in the near-by mountain wall. The vista down the gorge was not unlike some of our own magnificent Western scenery (see Color Plates X and XI).

**SUMATRA WOMEN ARE CAMERA-SHY**

On a sunshiny bend of the winding trail, a short distance down in the defile, I set up my color camera to try to picture some of the slender, laughing girls and women who stopped to rest from their heavy burdens, which they had been carrying on their heads for miles. High-speed snapshots were all that could have recorded those comely maidens as they rescued their bundles and fled precipitately up the hill. Color photography is not adapted to moving subjects.

Women hurried past my camera in the shadow of the overhanging embankment; not one was willing to pose even for a few moments. Young boys passed, carrying baskets of chickens on their heads or driving an occasional sheep or goat destined for the meat stalls. A few men were driving donkeys laden with cinnamon bark, and now and then a bullock cart rumbled by with a load of sugar cane; but most of the men wandered care-free along behind their overburdened womenfolk.

In one group that halted on the path was a young woman of queenly grace. Her features were finely molded; her oval face was fair, with a flush of pink from her morning walk; her light silk scarf was thrown back on her shoulders from her jet-black hair, and her teeth glinted like pearls, as she smiled at my request to be allowed to take her photograph. Yet nothing would induce her to pose alone; so I jokingly confiscated her basket of bananas and those of two of her companions and placed them in front of my camera; then, by further pleading, succeeded in getting the three to pose.

A group of idling men gathered; a few old women joined the crowd; and, with
A FORT DE KOCK BELLE PUTS THE RAINBOW TO SHAME

Among the Menangkabau people, women are the rulers of the household, inheritors of all estates, and principal traders. When one of them goes to market, she dons the apparel befitting her station. Vivid colors, mingled without regard to harmony, flash from every part of her attire.
HOMES OF THE BATAKS RESEMBLE ARKS ON STILTS

Toba Lake natives set their boat-shaped houses on palings, leaving spaces under the floors for use as corrals at night and as work rooms for the women by day. The Menangkabau legend that Noah landed on Mount Marapi may have inspired this style of architecture.

MENANGKABAUS LOVE COLOR, EVEN IN THEIR CHICKENS

Dressed in their best, and carrying all manner of showy produce, the natives come from every direction to the Wednesday and Saturday markets at Fort de Kock. Though the population of the town is only 2,300, the crowds that jam the streets in a kaleidoscope of brilliant hues at these times, often number 20,000 to 30,000.
BATAK HOUSEWIVES ARE PROUD AND INDEPENDENT

The women share in the profits as well as the labor of the farms. They make their clothing mostly of indigo-dyed homespun and for jewelry wear huge coiled-silver earrings attached for support to their pillowlike headdresses.

RICE IS THE STAPLE FOOD OF THE BATAKS

With long wooden pestles the women pound out the white kernels in primitive mortars and gather them in shallow baskets. The Dutch controllers must exercise constant vigil in seasons of poor crops and high prices to prevent the natives from causing famine by smuggling this cereal out of the country.
FÉRAFAT HAS WON RECOGNITION AS A HEALTH RESORT

To this charming village built on a spit of land thrusting out from the southeast shore of Toba Lake, 3,000 feet above sea level, the road winds down from forest-clad uplands through terraced fields of rice. Both wet, sawah, and dry, ladang, methods of cultivation are in use here, and the farmers are prosperous.
DIGNITY DISTINGUISHES THE BATAK GIRL

This young woman has a clear complexion, large brown eyes, and regular features, but her mouth has been marred by the chipping or filing of her teeth to the level of her gums. She wears a costume of homespun, with a huge silver earring held in place by a point of her padded cap (see also Color Plate III).

THIS CHIEF'S PEOPLE WERE ONCE FEROCIOUS

Some of the older men in the jolly old Batak ruler's village near Toba Lake remember days of savagery, but now they are peaceful. Though taller, darker and more bearded than the true Malay, they are of Malayan stock, have straight hair, and show no trace of Negrito blood.
EACH BATAK VILLAGE HAS ITS COURT AND MARKET SQUARE

The structure in the foreground is used for native trials and public meetings, and on trading days barter goes on around it. In the gables are intricately woven designs of bamboo. The horned heads decorating the roofs indicate the number of animals slaughtered when the building was completed. They recall the ancient legend of the victory of the buffalo, champion of the Sumatrans, over the tiger, chosen fighter of the Javanese, in a battle to settle supremacy between the two peoples.
Feminine merchants predominate at the Fort de Kock market.

Dressed in holiday attire, the young banana seller invites customers with a flashing smile unmarred by filed teeth. The pepper vender, squatting beside her bright-colored vegetables, is a bit dubious about the propriety of posing for her picture. Both girls are of the Mentawai, a tribe which accords its women positions of honor and responsibility.
CIVILIZATION HAS COME ONLY RECENTLY TO THE KORINTJI

Until a Dutch Government force opened their country in 1906-07, these people were a warlike, hostile tribe isolated from the rest of the Sumatran natives by the mountains which shut in their high valley home.

THE KORINTJI CHERISH STRANGE RELIGIOUS RELICS

These sacred symbols are brought out and carried in procession on such occasions as ceremonials to ward off earthquakes, crop blight, or epidemics. The buffalo horns may contain supposedly spirit-inhabited bits of the bodies or blood of human sacrifices.
the united chiding and urging from the onlookers, together with my feeble linguistic efforts in Malay, several other blushing and abashed girls finally braved the ordeal of being “shot” for their color portraits.

What colors the Menangkabau women wear! Their scarfs, blouses, and sarongs were like a confusion of tints from a shattered rainbow (see Color Plate 1).

BRILLIANT MARKET SCENES

In the market place only a motion picture in color could adequately record the massing crowd that moved about between the rows of sellers. One group was busy dispensing quantities of spices and bright red peppers; in another section tropical fruits lay heaped in piles on the ground. Vegetable sellers, peanut vendors, and Indian cloth merchants were doing a thriving trade. In another part of the market were piles of great cabbages, such as I had never before seen, and in the fish market a row of women sat with baskets of huge golden carp for sale, while more of their scalp produce flapped about in tubs (see Color Plates II, VII, IX, and XVI).

Off in one corner of the market square sat an old medicine man with a layout of blackened, grease-smeared old bones, animals' teeth, gnarled roots, horns, and shells, from which he concocted bottles full of potent-looking fluids and powders—a sure cure for all ills. May Allah protect the users! (See page 191.)

People, piles of produce, odors, more produce and more people—such is a Padang market day, where from 25,000 to 30,000 country folk gather at the twice-a-week passar. On the other days of the week markets are held in other villages of the countryside.

The day following the Fort de Kock market, I joined a crowd on its way to the famous weekly passar at Pajokoeboeh, some 20-odd miles distant, at one time the largest market in the highlands.

Its attendance formerly was estimated at 30,000, but of late it has given way somewhat to Fort de Kock.

After a few days in Fort de Kock we purchased seats in a heavy Government motor bus and rumbled out of town early one morning, bound for Sibolga, across the island. We rattled along the excellent metaled road which wound through the hills. Off to the northeast from Maraapi and Singgalang rose the volcanic peak of Ophir, so named by the early Portuguese, who thought they had rediscovered Solomon's famous gold mines, since quantities of gold were found in that region.

We rolled into the tiny village of Bondjol. Here was yet another market in full swing, with hundreds of people gathered about.

MONKEYS ARE TRAINED TO PICK COCONUTS FOR THE NATIVES

Early travelers returning from Eastern tropical voyages once got themselves branded as cheerful romancers when they related tales about indolent natives who had trained monkeys to climb the tall palm trees to pick their coconuts; yet when we halted at the village of Kota Nopan, in the midst of a coconut grove, there was plenty of evidence of the veracity of the stories. Several men and boys were working with monkeys on long strings (p. 206).

Clever little fellows, those monkeys. They climbed around from place to place in the fronded tops of the coconut trees and selected only the ripened coconuts.

Some were also working in a few kapok trees, picking and biting off the dry pods of kapok (tree cotton). As a young boy jerked at the long cord tied to his monkey's collar, and cajoled the little sandy-haired laborer to keep him busy, I made some snapshots to prove the tale.

After more than two and a half days' travel, with night stops at Government resthouses, we dropped down from the plateau to Sibolga, on the Bay of Tapanoeli. Ours was one of the last long passenger trips on the heavy, low-speed trucks, for even as we roared into town the Government was receiving a fleet of swift, new passenger busses.

Sibolga, backed by green mountains and facing the coral strand washed by the waves of the Indian Ocean, was the old Tapanoeli, which once served, as did Benkoelen, as an early trading post for the British. To-day it is a sleepy, sprawling town, with only a moderate amount of foreign enterprise and export trade.

We left Sibolga on one of the comfortable, new passenger busses, on the road that swung abruptly eastward over the hills and across the island. As the car
YOUNG SUMATRA APPRECIATES A JOKE

BASKET MAKERS PLY THEIR TRADE AT PAJÖGOEMBOEH

Considerable skill in designing is shown by these craftsmen, who weave not only market hampers, but intricate bamboo panels for home decoration (see Color Plate VI).
OLD MEN AT BALIGE RECALL PRIMITIVE DAYS

It is only in the last 15 or 20 years that the Bataks of this region have been in touch with civilization (see text, page 210). The peculiar expression of the months is due to filed teeth.
NATURE PROVIDES AN EXCELLENT LABOR-SAVER IN SUMATRA

Easy-going natives outdo the clever traveler of fiction who flings sticks at climbing apes to draw a return fire of edible fruits. When the Sumatran needs coconuts or kapok, he simply sends a trained monkey up a tree for a supply, directing the little picker by calls and by cunning tugs on the long leash attached to his collar (see text, page 203, and Color Plate XII).
climbed the steep zigzagging motor road, which makes more than 600 curves within 20 miles, we had many panoramic glimpses of the palm-girt Bay of Tapanoeli, where scores of white-sailed fishing boats were running before the fresh Indian monsoon.

**ONCE HOSTILE BATAKS HAVE UNDERGONE A GREAT CHANGE**

In the National Library at Bangkok, Siam, I once found a fine leather-bound history of Sumatra which bore the publication date of 1811. It was written by a man who then best knew the Tapanoeli district. He gave many descriptions of the people, which for accuracy might almost be current reading to-day; but while he described the Bataks he gave little information about the interior of their country. His map showed long ranges of hills through the Toba Lake region, although he mentioned the rumored story of a great mountain lake which had never been seen by any except the Batak tribes.

It was, in fact, not until 1863 that a Dutchman, Dr. A. Neubronner van der Tuuk, succeeded in reaching the lake, which was held sacred by the natives, but he was forced to turn back immediately on account of the threatening attitude of the Bataks. An earlier party, composed of three Americans and two Frenchmen, had been murdered on the way.

To-day, thanks to efforts of the Dutch Government and the missionaries, the trip to Toba Lake and its surrounding territory can be made in perfect safety. In the last 50 years the Bataks have undergone a great change. They are no longer hostile to the white man and they have long since ceased the practice of the ceremonial eating (a fine distinction from cannibalism) of their elderly relatives and their enemies. They are now a peaceful agricultural and pastoral people.

We crossed long stretches of uncultivated, rolling plateau, which greatly resembled a bracken-covered English moorland. Then of a sudden we topped a rise in the road, and several hundred feet below lay green, terraced rice fields bordering the cobalt-blue waters of gigantic Toba. The magnificent view reminded me of Lake Titicaca, surrounded by the terraced fields of the Incas, in the high Andes.

Our bus rushed down the sharply in-

**EVERY MAN HIS OWN COFFEE-GROWER**

Most of the homes in the Padang Highlands have their small gardens with a few trees of the best varieties. The natives make a drink from the dried leaves as well as from the roasted berries.
SIBAJAK VOLCANO PRESENTS DIFFICULTIES TO THE PHOTOGRAPHER

Clouds of sulphur fumes prove that the giant is merely dozing. The author worked thus for two hours in the crater (see text, page 219).

BATAKS OFTEN ADORN THEIR HOUSES WITH CARVING

Elaborate designs cut with primitive tools and painted red and black completely cover the outside walls of this building. The work shows remarkable detail, though it is somewhat inferior to that done by the Mentangkabaus (see text, page 219). The girls in the middle foreground are working at a loom.
GRACEFUL BOATS FLY THE WATERS OF LAKE SINGKARAK

Built like canoes, with outriggers for rough sailing, these slender craft are capable of remarkable speed. The scene has the charm of Switzerland under tropic skies.

FOR FASHION'S SAKE THE BATAK ENDURES TORTURE

It is still the custom for young men and women of the tribes near Toba Lake to have their teeth chipped off, often to the level of the gums (see text, page 219). With equipment consisting of a mallet, chisels, files, and a saw made by notching a steel clock spring, the "dentist" performs the operation for a few cents.
clined trail and drew up at the village of Balige.

Lake Toba, at an elevation of 2,000 feet above sea level, covers an area of about 780 square miles. It is encircled by high table-lands and mountains, with the inhabited island of Samosir, some 27 miles long and 13 miles wide, rising out of the center (see, also, page 220).

Balige is a village of Toba Bataks at the southern end of the lake. It is a collection of strangely carved wood and bamboo houses built around a large market square. We found a group of dark-skinned Batak men squatting in the shade of the long, covered stalls, while the women bartered over their vegetables. Some of the wrinkled veterans had, no doubt, tasted the flesh of their fathers or enemies, partly cooked with a dash of lemon, as that is the way I am told they ate it. Certainly, several of them looked equal to it.

The eating of the aged is thought to have been based on a vague conception of immortality. The aged man's body would thus become part of the strong brown bodies around him, and the wisdom of the wise and experienced would also be passed on to their successors, while the fallen warriors would give of their strength and bravery. Apparently, then, both the eaten and the eaters—except, of course, the unfortunate enemy or captive—seem to have favored the arrangement in most cases.

**DOG MEAT IS IN GREAT DEMAND**

Dog meat finds a popular sale in the bazaars, to satisfy the queer appetites of the Bataks, and on all large market days the meat stalls are heaped with both the cooked and raw flesh. But we missed the large weekly passar, so I saw none of it at Balige. Several Fidos were wandering happily about and seemed to be in no immediate danger of their lives.

"You know, the Bataks also have their pets," said a missionary lady, when I humorously pointed out the apparent inconsistency.

There are several tribes of Bataks in the regions surrounding Toba, and the customs and dress vary according to the tribe. Some of the Bataks have been converted to Christianity, others have become nominally Mohammedans, yet a majority of them still cling to their ancient religious beliefs and animistic practices.

From Balige we climbed to the uplands again and later dropped down between flooded rice terraces to Pērapat, a delightful health resort, located on a long spit of land extending out into Toba. The view from the near-by mountains, showing the rice terraces in the foreground, the red cottage roofs dotting the green headland jutting into the intense blue waters, and the purple-tinged cliffs of Samosir Island rising in the distance, cannot be surpassed for beauty in any land (see Color Plate IV).

With the cool, temperate climate, the advantages of fresh-water bathing, canoe sailing, and luscious strawberries and cream—But you must visit Pērapat.

On the shore of the lake I found some Batak fishermen hanging their dragnets out to dry after catching a supply of golden carp, such as those on sale in the Fort de Kock market (see Color Plates XIV and XVI). Both Sumatra and Java seem to have an abundance of these golden fish.

At some of the homes women were knotting new fishnets or were weaving scarfs and sarongs on primitive looms (see Color Plate XIV).

From Pērapat we motored to Pematang Siantar, the center of many large tea and rubber plantations, and then curved back again past the upper end of Toba, skirting the tiny village of Haranggaol, and sped on to Brastagi, on the Karo Plateau.

We arrived on a Saturday forenoon. Again it was market day! Thousands of Karo Bataks thronged the passar, purchasing vegetables, spices, fruits, and cloths. The colors of the Bataks are not so vivid as those in the Padang Highlands, most of the costumes being indigo-dyed homespuns. Instead of the brilliant scarfs of the Menangkabau women, the Karo Bataks wear peculiarly folded turbans which resemble thick blue pillows (see Color Plates III and V). Some of the women, however, wear bright purple and blue blouses of figured silk; so even in a Batak bazaar there is plenty of color to record, if only one can get it.

But never have I seen people more mercenary than those in the Brastagi market. Everyone wanted from one to five
On Wednesdays and Saturdays all roads to Fort de Kock are bright with crowds of feminine traders trudging along with baskets of fruits and vegetables on their heads. Despite their finery they are exceedingly shy, and considerable persuasion is necessary to induce them to pose for pictures.
SUMATRA IS SEEN IN ITS LOVELIEST ASPECT AT KARBOUWENGAT

Ages ago a mighty river dashing down from Mount Marapi formed a deep lake near the place where Fort de Kock now stands. The water later found its way to the sea, leaving the beautiful Water Buffalo Gorge with only a shallow stream at the bottom. To-day the floor of the valley is rich in rice fields, and the walls are clothed in a bewildering array of tropical vegetation (see also opposite page).
SHEER WALLS OF ERODED SANDSTONE SHUT IN WATER BUFFALO GORGE

Above the pleasant rice fields on the floor of the Karbouwengat, colorful cliffs tower to a height of nearly 400 feet at some points. By narrow, winding paths the upland native women carry their produce down into the valley on their way to the Fort de Kock market.
SIBAJAK CONSTANTLY BREATHES CLOUDS OF STEAM

Natives from Brastagi near by climb to the crater of this volcano to collect pure sulphur which has gathered on the rocks and in the lake at the right. The fumes issuing from the fissures quickly tarnish every bit of silver carried by visitors.

MALAV BOYS HAVE PETS OF PRACTICAL VALUE

When the monkey playmate of these four lads from Sibolga grows up, he will be trained to pick coconuts and other high-hanging tree products. Amazing intelligence is shown by these little animals; they are taught to gather only the fruits desired by their masters.
SUMATRA. A RIBBON OF COLOR ON THE EQUATOR

SUMATRAN TOBACCO IS GROWN ON EXTENSIVE EUROPEAN-OWNED ESTATES

This plantation, the largest on the island, has 80 great drying sheds such as the one seen in the background. The proprietors import many Chinese and Javanese laborers in addition to the natives they employ.

THRIFTY CHINESE PROSPER AMONG THE TOBACCO WORKERS

In Sumatra, as elsewhere in the Orient, laborers from China grow wealthy where natives can earn only a fair livelihood. They are the canniest people of the East. The man is holding the large rack which he uses to carry the newly picked leaves to the drying shed.
TARA LAKE TERMS WITH GOLDEN CARP

Native fishermen go out in fleets of canoes strung together by long lines from which dangle large white leaves. The waving shadows frighten the fish toward the lotus-spangled shallows near the shore and into matted nets hung on circles of stakes.

BATAK WOMEN WEAVE PRETTY PATTERNS IN HOMESPUN

Sitting on a grass mat spread on the ground in the space beneath the floor of her house, this girl works industriously at her primitive hand loom. She has spun and dyed the thread which she is using. Indigo, which grows abundantly near Toba Lake, furnishes the blue color.
YOUNG GIRLS TAKE PART IN THE MARKETING AT FORT DE KOCK

The maiden with the basket of cabbages on her head has toiled down from the Padang highlands with her produce. Dressed in her finest, the other is prepared to enjoy the holiday, but she is rather suspicious of the camera. It is noteworthy at these markets that the men are little in evidence. Feminism triumphs here.
EVEN THE FISHWIVES' WARES ARE COLORFUL AND ATTRACTIVE

Goldfish of huge size are found in lakes of Sumatra. One traveler describes a private pool in which gleaming carp were so numerous that birds alighted on their backs. These women have brought an early morning catch to sell at Fort de Kock.
gilders to pose for his picture. An old villager, carrying a fine staff with the typical Batak horse and rider carved on it and with the top tufted with feathers, halted before my camera while I exposed a film; but when I handed him a sufficient tip he sniffed in derision and handed it to his little grandson who accompanied him.

In the near-by village of Kabandjahe, where I photographed some of the finest examples of multi-gabled buildings to be found in all Batak land, the small boys were extremely saucy until I let them look into the focusing screen of my reflex camera and allowed the leaders to take a few snaps themselves. It was a new trick for them, and their impudence melted immediately. In fact, the boys helped expose several excellent films of a dozen shy women at work in the community rice-pounding shed.

**Gabled Homes Handsomely Decorated**

The houses of Kabandjahe are unique in construction. All are raised on stilts a few feet above the ground, and the flaring sides are covered with tall double-decked roofs of heavy thatch. The chief houses are also crowned with several oddly shaped cupolas. The ridgepoles and the corners of the cupolas terminate in white modeled heads, which form the mounting for sets of horns. The number of pairs of horns indicates the bullocks or buffaloes sacrificed at the building of the structure (see Color Plate VI).

Most of the out-thrust gables of the houses and cupolas contain beautifully designed patterns in woven bamboo painted in various colors. The cupolas are further surmounted by queer carved figures exactly like that on the staff of the old man in the Brastagi market (see, also, page 193).

Besides the great communal houses and the lesser buildings, the villages contain several gregariously carved and colored dovecotes, court buildings, and pavilioned tombs, which are modeled after the most elaborate cupolas.

The women clung to the shadowed verandas or peeped from the dark recesses of the houses and would not venture to expose themselves before my "infernal black box." A number of them wore heavy coiled-silver earrings. The rings are worn so that one points forward and the other backward, and they are so heavy that the weight has to be partly supported by the corners of their blue turbans.

**The Native Dentist Wields Chisel and Mallet**

Practically all of the Bataks file the teeth upon reaching maturity. With a great many the teeth are chipped off to the level of the gums. Presumably the practice enhances beauty to Batak eyes. The unsightliness of the mouth, in Western eyes, is further emphasized by the chewing of quantities of blood-red betel nut.

In the open market places the native dentist does his work, with the patient lying at full length on his back on the ground. A mallet and chisels, a file, and a small saw are his implements; with these he chips and files the teeth down. But what excruciating pain the victim must endure! The teeth are shortened for only a few cents each (see page 200).

Notching the skyline in several directions from Brastagi are active volcanoes. Smoldering Sibajak is the nearest. So one morning, accompanied by a young guide, we shouldered our heavy cameras and climbed up the most direct, though tortuous, trail to the smoking crater. The jagged hollow in the mountain top was full of hissing, sulphur-encrusted fumaroles, boiling mud pots, and in the bottom was cupped a warm, milky sulphur lake. While we worked in the crater, photographing the fumaroles as they ejected whistling steam, all the metal work on our cameras and the silver coins in our pockets became badly tarnished by the pungent vapors. Several natives were collecting bags of sulphur and carrying them down to the plains to sell (see page 208).

The next day we obtained motor transport and hurried down 45 miles from the invigorating climate that we had been experiencing at the 4,700-foot altitude of the Karo Plateau, through acres of rubber, oil-palm, and tobacco estates, to the low, hot plain, and arrived perspiring in sultry Medan.

Many planters, in the great rubber boom, cut down their oil-palm groves and planted rubber trees. The plains surrounding Medan, however, have been most noted for their tobacco plantations. The
TOBA LAKE NATIVES ENJOY A WEEKLY FAIR

Although this wild region has no market town such as Fort de Kock, the people gather every Saturday morning at a sort of picnic ground, known as Tika Radja, to barter their produce, exchange news, and perhaps arrange for marriages. Most of them come to the meeting place in canoes, paddling in from Samosir or from distant points along the shore (see, also, text, page 210.)
PICKABACK TRANSPORT

Dutch soldiers' wives often journey in this manner to the otherwise inaccessible interior posts where their husbands are stationed.

PET AND PERCH MAY BE BOUGHT FOR A DOLLAR

The scientific name of this ungainly specimen of the hornbill family is *Cranorhynchus corrugatus*. Tame birds are prized throughout Sumatra.
THE SUMATRAN SCARECROW IS AN AMAZING DEVICE

To frighten birds from his growing rice, the highland farmer climbs the notched pole ladder, and with hoots and yells shakes the rattan strings stretched to the extremities of the field from the flexible uprights.

WATERFALLS AROUND NORTH OF TOBA LAKE

This wild region is a high plateau cut by deep gorges, into which numerous streams plunge in gleaming cascades. The scenery is similar to that found in the western part of the United States.
CLIMBING A SINGLE-POLE LADDER REQUIRES AGILITY

The steps are mere notches, barely deep enough for the toes, yet the native easily mounts to his perch on top of the scarecrow (see page 222).

THE SUMATRAN NATIVE DELIGHTS IN A PET BIRD

The intricately woven cage is provided with a wooden hook by which it can be suspended from a pole near the owner's house (see, also, illustration, page 222).
EXTENSIVE OIL FIELDS HAVE BEEN DEVELOPED IN NORTH SUMATRA: WELLS AT PANGKALAN SOESOE, 45 MILES ABOVE MEDAN.
A SUMATRA RUBBER PLANTATION

Though the industry has not been fully-developed, it is advancing rapidly under the direction of a Government experiment station at Medan. Coffee is usually grown among the rubber trees until the latter are large enough to yield gum, and then the ground about them is cleared.
Laborers on the Tea Plantations Are Mostly Women.

In enormous hamperes these workers carry to the packing houses the product of their day's toil.

The largest and oldest tobacco company annually ships to Europe more than 500 tons of the best quality Deli leaves, which are widely used as wrappers in cigar-making. This company employs some 40,000 Javanese, Tamil, and Chinese men and women laborers, who are supervised by a large staff of foreign managers.

Gold Seal Works Magic

Back in Arnhemia, at the last village of the Bataks, I spent our last morning trying to make a few more autochromes of the Batak women. The village headman agreed that we might make photographs, but we could get no one to pose. We pleaded with him, but seemed to accomplish nothing. At last, with a new idea born of despair, my companion, who was carrying on the conversation in Malay, asked me if I had a letter or anything that I could show the headman. I drew out a letter bearing the shining gold seal of the National Geographic Society's certificate of membership and handed it to him.

The headman turned it sidewise, upside down, and at every angle. Of course, he could not read one word on the paper, but the seal was impressive. He nodded his head and beckoned the women to pose as I had desired. Once in the game of dressing up for her portrait, however, an old grandmother eclipsed the chief's effort in helping to arrange for the pictures.

Catching a passing bus, we hurried
Among the hill tribes of Sumatra, the tribespeople often group together for community efforts. It is not unusual for 20 or more women to work together in community sheds to pound rice. Hogs, chickens, and dogs wander at will about the village and under the houses, picking up whatever they can find to eat.

Back to Medan and soon aboard the train for Belawan, where we were to embark for Penang.

The steamer slipped out from the mangrove swamps into the Malacca Strait. Not long after, as I looked back along the wash of the throbbing screw, a crimson, dusk-filled horizon closed over the Sumatran coast.

Thus ended our visit to the fascinating island astride the Equator, of which few travelers see anything beyond the distant smoky blue mountains, as their steamers leave the Malayan ports India-bound.

Notice of change of address of your National Geographic Magazine should be received in the office of the National Geographic Society by the first of the month to affect the following month’s issue. For instance, if you desire the address changed for your April number, the Society should be notified of your new address not later than March first.
MODERN YOUTH FINDS QUAIN'T BACKGROUND IN ALBEROBELLO, ITALY

Pupils from a school for girls furnish a striking note of contrast, grouped along the wall and on the edge of the low roof of an old trullo, while a small boy peers down at them from a vantage point reached by agile climbing. The town of conical houses is full of surprises; many of its folk are as up-to-date as its architecture is antiquated.
THE STONE BEEHIVE HOMES OF THE
ITALIAN HEEL

In Trulli-Land the Native Builds His Dwelling and
Makes His Field Arable in the
Same Operation

BY PAUL WILSTACH

AUTHOR OF "HOLIDAYS AMONG THE HILL TOWNS OF UMBRIA AND TUSCANY" AND "JEFFERSON'S LITTLE
MOUNTAIN," IN THE NATIONAL GEOGRAPHIC MAGAZINE

With Illustrations from Photographs by Luigi Pellerano

HAVE you ever seen the trulli?" ventured a small, shy man with
little gold on his cuffs but several ribbons on his left breast.

"Trulli? Trulli? What is or what are trulli?" I inquired. The word suggested
gastronomic rather than geographic explora-
tion.

We, a group of Italian naval officers and
an American engaged in snooping among the
more interesting historical and unusual
places of the "heel" of Italy, were seated
at a table of an out-of-door café in Tar-
anto, a pleasant seaside city which enjoys
the distinction of ranking second in im-
portance among Italy's naval bases.

My newly made friends had been en-
deavoring to aid me in finding a field fresh
for my wandering feet. One had sug-
gested the Castle of Pulsano, with its huge
stone at the top, so suspended that it could
be dropped on any assailants approaching
by the outside stairway running from the
pavement to the highest battlements of the
stronghold. Another had suggested Ma-
tera, sometimes called the Subterranean
City, because a large proportion of its pop-
ulation lives inside the earth and two of
its churches are grottoes in the rock. Still
others had urged Manduria, with its so-
called Well of Pliny, and beautiful Lecce,
the "Florence of Lower Italy."

But with the mysterious word "trulli,"
all thought of other places of pilgrimage
vanished.

With cascades of words and eloquent
gestures, I was informed but not enlight-
ened as to its meaning. I realized, how-
ever, that here was unhackneyed quarry
for the hunt, and so I set out to seek the
trulli.

They were hidden away between the
obscure towns of Francavilla and Alberob-
ello, on the edge of the billowing hills of
a limestone ridge, Le Murge, which par-
allels the Adriatic, between two flat plains,
the Tavoliere di Lecce to the south and
the Tavoliere di Puglia to the north. Lit-
terally, tavoliere means checkerboard, and
the small rectangular farms in these plains,
contrasting with each other in the varying
colors of the raw earth or the grain or
grass or trees, sustain the figure.

SETTING OUT FOR TRULLI-LAND

Francavilla is 21 miles east of Taranto,
on the railway line to Brindisi, and here a
leisurely second-rate branch line meanders
northwestward 35 miles through rolling
country to Alberobello, and thence in
the same direction to Bari (see map, p. 233).

Leaving Taranto, our train trailed east-
ward across green fields dripping with
the blood-red of poppies; past orchards
of peaches, plums, cherries, almonds, and
young olives, or comparatively young
olives, for the youth of any olive tree
I've ever seen dates back by centuries;
past grazing stretches mottled with yellow
cows and black sheep; a level terrain,
and rich, if the numerous well-built farm
establishments signify.

The cloudless sky was blue as an in-
verted sea. The sunny air had the crystal
translucence that it has in near-by Greece,
revealing distances microscopically and
bringing them in detail to the naked eye.

As far as the horizon, there were no
buildings which were not white, whether
detached in settings of green or massed in
villages. Nowhere was a gable seen, for
here the house tops are invariably flat.
WALLS OF ENORMOUS THICKNESS SEPARATE THE FIELDS

In season of vegetation these plots form a charming tapestry of contrasting hues, which make clear why some portions of this neighborhood of Italy are called taralli, or checkerboards (see also, text, page 229, and Color Plate II).
TRULLI DOT THE COUNTRYSIDE BETWEEN MARTINA FRANCA AND LOCOROTONDO

In the two towns, however, none of the stone houses is found. Alberobello is the only city where this style of architecture prevails.

TRULLI-LAND IS A WORLD OF STONE

After the peasants have built their houses and fences, making the walls very thick to dispose of as many rocks as possible, they often have to stack the residue in huge ricks in the fields (see text, page 234).
I missed the bell towers, the campanili, those perpendicular poems in masonry that grace Italy in nearly every other sector. But, curiously, even more I missed the slender fingers of the minarets and the low, white, hemispherical domes above the Moslem bathhouses, for air and architecture here suggest Italy less than they do the neighboring Levant, whose rim is just across the narrow Adriatic.

At Francavilla I changed to another train, which took us deeper into the heart of the country. The carriages on this branch railway, reaching into the foothills of Le Murge, were mere toys for size. There were no second-class compartments and only a single one of the first class—and that was empty.

Third-Class Passengers in Southern Italy

I cast my lot with the third class. The carriage was not sealed off into compartments, but was unobstructed for its entire length, somewhat after the democratic fashion of an American railway car. Its wide-open windows let in sun and air on its well-swept floor and its gleaming varnished benches, and revealed a simplicity and cleanliness of place and passengers which were both a surprise and an encouragement to acquaintance.
They were all neighborhood folk on short trips. There were three young girls with serene and regular faces which seemed copies out of Raphael’s canvases. With them was an older woman, who wore the full woolen skirt and gayly embroidered bodice and white coif which were obviously the traditional costume of the neighborhood, and stamped her as probably a household servant sent along to chaperon the gentle signorine.

Across from them sat a Fascist in his black shirt and gray uniform, his Robin Hood bonnet at a rakish angle. Over one shoulder and under the other arm swung an ammunition belt, and his holster was bulging and businesslike. In his gloved hand he carried his bastone, not a delicate swagger-stick, but a stout cudgel that looked as if it might be “loaded.” He was on some errand of righting Italy, making it safe and clean and busy, refreshed and strong. But en route, I observed, he kept his big, dark eyes wide open on the three signorine.

Others of my fellow travelers were a man with a cello; a boy with his shoulders draped with a garland of the tiny black oysters of Taranto for an inland feast; a swarthy peasant woman carrying a drooping fuzzy bouquet of four hares; a sailor homeward bound from completed service, with a blue plaid bundle whose contents of invisible cheese and sausage and fruit were suggested by a loaf of bread sticking out of one opening and the slender neck of his fiasco of wine sticking out of the other; and there was a blind fiddler feeding out new fields, no doubt, and the cheeriest man in the car, singing all the way.

At one end a young couple and their baby crowded in, but they would not have been noticeable had it not been that the infant was bound like a white cloth package, rigid and straight, with only head and hands exposed, exactly like a glazed terracotta lambino by a Della Robbia come to life out of the tympanum of a Tuscan church door.

Everyone was settled and the doors had all been slammed and the functionaries had begun to whistle the train on its way when, breathless but laughing, in popped a little old woman in simple peasant black,
increase the efforts of the peasants to dispose of them came into evidence with the low, loosely piled walls which began to line the landscape.

Mile by mile the walls increased in breadth and height to a size ridiculously beyond what was practical as a barrier, tapering slightly from a 5- or 6-foot base and rising 4 or 5 feet high. As they increased in size they grew in number, making the fields smaller and smaller (see illustration, page 230).

Though there was more and more stone in these fences, scarcely less seemed to remain in the ever white-flecked soil, which nevertheless supported grain and vines and fruit trees. No less astonishing results of the effort to rid the soil of stone were the great cubical ricks of them which rose in the middle of some fields.

**PROBABLY THE WORLD’S MOST ECONOMICAL HOMES**

And then, suddenly, I had my first glimpse of the trulli—strange cottages with high conical roofs rising like pointed domes above low perpendicular side walls.

From the trulli near the car window I saw that they were built of small flat slabs or slates of field limestone, and later learned that the construction is invariably "dry"—that is, without mortar or cement to hold the stones together. This self-supporting, dry-constructed conical roof is one of the wonders of stone masonry, and its like is probably not to be found anywhere else (see page 232).

It is small wonder that I came upon the trulli with surprise. Science is dubious about them and so keeps a cautious tongue. I tried to find even a single map that mentioned the region. The guidebooks treat it cavalierly—that is to say, they snub it. Since finding it I have made a game of asking tourist agents about it, and haven’t yet failed to draw a blank. Singularly, even the Italians there, at the foot of Italy, round about trulli-land, know little or say little of it; and in other parts of their peninsula, as well as in the wider world of which their peninsula is a part, the Region of the Trulli is as little known as are its unique habitations.

I do not know where, in the entire civilized world, one will find more economical houses. The material costs the builder nothing. He is not even at the expense of carting, since he finds the stones on the spot where he builds. The stones are used in the flat, irregular form in which they crop out of the soil, so there is no cost for working up the material.

The farmer by gathering up this material for his house helps to clear his lands, and so places more soil at his disposition for cultivation. Moreover, construction costs nothing but time, for each farmer builds his own trullo without the expense of architect or mason. Finally, it is a building which seems to stand indefinitely, with a minimum of renewal or repair.

As long as I was in the region of the trulli I searched the landscape for houses which were not trulli. There were no others. In every direction I saw only their quaint conical roofs. And, by one of the curiosities of structural custom here, one may, even at a distance, tell at a glance of how many rooms each house consists; for if it have more than one room, then each additional room has its own conical roof.

The trullo with one cone may represent a storehouse, or an animal shelter, or the dwelling of one of the poorest contadini (country folk). According to the means of the builder or the increasing size of his family, as he adds rooms he adds a cone above each of them; so that larger trulli present a family group of two or three or four, or even of seven or eight, cones in each domestic unit.

**"A WORLD OF PETRIFIED HAYSTACKS"**

These houses make an instant appeal to the imagination. From the train, I found it difficult to isolate a single specimen, for they are everywhere about, as far as the eye can see. In the little commune of Martina Franca alone there are nearly 2,000 trulli. There are more trulli in the 25 miles from Francavilla to Alberobello, the extent of the Plaga dei Trulli (Region of the Trulli), than there are muraghi in the entire island of Sardinia.*

As I looked out upon the bewildering

---

COSTUMES OF 1799 GRACE GALA DAYS IN BARI

For state occasions serving folk of each old house have their distinctive traditional garb. These uniformed sallenti are guards of the banner of the commune.
Farms near Locorontondo afford natural settings for trulli.

By building his queer, conical-roofed house of stones cleared from his land, the thrifty peasant achieves a double triumph of economy. Fences around the fields are erected less as barriers than as means of disposing of the soil-cluttering rocks.
FOGGIA RETAINS SOME MEMORIES OF ITS PAST

Though this bustling railroad center is one of the most modern cities of Italy, it brings out costumes of 1700 at times of festival. It was founded in the days of ancient Rome by people of ruined Arpi and derived its name from the fossae, or trenches for storing corn.

QUILTED SHAWLS ARE TREASURED IN BARI PROVINCE

Elaborate handmade costumes with headdresses and shoulder coverings of silk were the pride of women in the district around Alberobello in the early part of the 19th century, but few of them survive to-day save as keepsakes. Here, as elsewhere in Italy, needlework is a fine art.
FOLIAGE GROWS ON THE TOPS OF OLD TRULLI

When the winds deposit soil and seeds in the interstices among the mortarless stones, the householder acquires a ready-made roof garden. Walls are calcimined once a year. This is a characteristic farm near Alberobello.

SKILL AT POTTERY SEEMS INSTINCTIVE WITH ITALIANS

In the Trulli country the fashioning of earthenware vessels is a flourishing industry. Many of the designs are strikingly original and artistic. Unglazed jugs, such as the large white one in the right foreground, are used as water coolers in this hot, dry climate.
FOGGIA GIRLS WITH OLD-TIME CAPS NEED NO PARASOLS

Costumes like these, though rarely seen to-day, were common in southern Italy up to 1900. In the last century such spotless white headdresses and colorful aprons were a part of every bride’s trousseau.

FASHIONS FOUR CENTURIES OLD ARE NOT FORGOTTEN IN BARI

Southern Italian peasant women are famous for their needlework. Until recently they not only made all their own clothing by hand from fabrics spun and woven at home, but did all the weaving and tailoring for their menfolk.
THE TRULLI ZONE OF ALBEROBELLO HAS BEEN MADE A NATIONAL MONUMENT

In this village is found the largest collection of “stone haystack” houses in Italy. The encroachment of modern structures, however, has spoiled their effect somewhat. They look more attractive in the country landscape.
ELABORATE PEASANT COSTUMES ARE COMMON IN RURAL DISTRICTS

The women with striking hand-woven shoulder wraps are from the commune of Ravino di Puglia, Province of Bari. Their neighbors are a shepherd and his wife, who live in town because of the scarcity of water in the country. The husband goes out daily to drive his herd over the barren fields.
Walls of great thickness make the trullo cool in summer and warm in winter. The greatest difficulty is in the problem of illumination and ventilation, but there is always room in the flagged court for family work that requires more light than the tiny windows let indoors.
multitude of the strange cottages, a cone or a group of cones every few hundred feet, in all directions, for miles and miles, the effect was to me without parallel. It suggested not only a world of queer prehistoric tombs, or giant beehives, or Titanic candle-smithers, but a world of petrified haystacks, or a vast military camp of ancient Roman tents, abandoned and turned to stone. I could scarcely tell whether the effect was Cilin or Gargantuian, but it was wholly unreal and indescribably fascinating. It might have been the phantasy of an illustrator of a fairy story come to life.

When our train came to the hill town of Martina Franca and others, I looked up at horizontal roof lines and realized that, though there are trulli exclusively in the landscape of the country, there is not a single trullo in the make-up of the towns of trulli-land, until one reaches a single town, even farther north, which is the unique exception, at the district's end.

I descended from the train at Martina Franca and, with five others, took a place in the only carryall in the town, drawn by the only horse in the town, as far as I saw. The conveyance might have held four normally, including the fat driver, if the passengers were sufficiently slim.

The horse was a model of slavish endurance over a long mile that rose sharply all the way to the town proper, on the apex of the hill, where, in more warlike and predatory ages, Martina Franca was better able to maintain the independence reflected in its name.

AN AUTHORITY ON TRULLI ACTS AS THE AUTHOR'S GUIDE

This remote little city harbors a population of more than 20,000. Under its coating of whitewash it might pass for a huge monolith of chalk sculptured into architectural forms. Coming out of a world of trullo cones, where one is conscious of curves only and not at all of angles, when the first houses of the town shut out the green country landscape, I was for a moment startled to find myself in a wholly white world of straight lines and angles only, a world entirely without curves and where every roof is flat.

To ask any question about the trulli in Martina Franca produces instant reference to Prof. Giuseppe Grassi, the regional historian, and any such questions asked of him act as a key to his enthusiastic aid.

Whatever may be his occupation at other times, as long as I remained in Martina Franca it was exclusively and unselfishly social. He gave his attention wholly to trudging over the neighboring hills with me, making access easy to every type of trullo, and citing and explaining their characteristics and variations.

He gave me points sufficient to tell nearly all that the reluctant authorities seem willing to admit of the trulli.

Michele Gervasio says that they are all modern, whereas Grassi himself says, "They appear to be extremely ancient and prehistoric." He also quotes De Giorgi as calling them "the last word in microlithic construction." Cosimo Bertacchi says, "The trullo is a survival of the remotest period." The trulli suggest to Gervasio the possibility of their descent from the specchie, prehistoric buildings of a megalithic character, remains of which have been found in many places in this "heel" of Italy.

These writers and several others bracket the trulli with the specchie of near-by Lecce, the talayots of the Balearic Islands,* and the nuraghi of Sardinia. As Gervasio remarks, however, the remains of the specchie permit no decision as to them. Between the trulli and the talayots and the nuraghi, except for dry construction, there is no common feature.

The nuraghi are enormous solitary towers, conical in their rise, but truncated, so that the cone never converges to its pointed peak, as in the trullo. Moreover, the nuraghe cone rises directly from the ground instead of, as in the case of the trullo, from a low perpendicular walled base. The nuraghe in its usual form is further distinguished from the trullo by the fact that, inside, it contains two rooms, one above the other, connected by a stairway in the wall.

As we were passing out of the city gate and the conical houses again came into view, I asked my learned cicerone the meaning of "trullo." He shrugged his

With their peculiar roof decorations, these homes present a striking picture. On the outer wall of the building in the foreground and above the gate are concrete figures of saints. The owner is evidently a person of importance, for the poorer peasants do not go in for elaborate cornices and other decorations.
TRULLI ARE LAID UP FROM WITHIN LIKE CISTERNS

At a height of 6 or 7 feet the square base gives way to the conical top. The light patch on the left is sunlight from a large window. This picture was taken by setting the camera on the floor, with the lens pointed toward the ceiling. When this trullo is completed, the whole interior will be covered with plaster if the owner is well-to-do (see, also, illustration, page 248).

CROSSBEAMS MAKE LOFTS IN SOME TRULLI

When the householder needs an upstairs in his home, he sets a few timbers across the base of his cone ceiling. The rafters may support a floor for a second-story granary or serve, as in the present case, merely as convenient hanging places for cooking utensils and other things. This view from the floor shows the top of the door arch as a crescent at the upper right.
ALBEROBELLO HOUSEWIVES ATTENDING TO THEIR KNITTING

Nowhere else in Italy do people live closer to the soil than in the region of the trulli. Here houses, utensils, and clothing are homemade from materials supplied by the land.

shoulders and spread his hands in indecisio.

"The origin of the word, as used to designate these Apulian cottages, has not been made clear," he explained. "There would appear, however, to be an affinity between it and Trullus, the name of the domed chamber in the imperial Byzantine palace in Constantinople. The Constantinople Council of 692 was held in the Trullus, and from it took its name, the Trullan Council, or Council in Trullo.

"The word means—well, it means just what we see there, as far as our eyes can see. It means the stone conical house, the domed house, unique to this neighborhood."

WALLS SEVEN FEET THICK

I was at first astonished by the apparently needless waste of material and effort that goes into the building of a trullo. Its side walls, though seldom so high as eight feet, vary in thickness from five to as much as seven feet. This might be interpreted as a survival of an age of defended
Automobiles never invade the monument zone

Raised stone crossings, built to enable the trulli dwellers in times of heavy rainfall to cross the streets dry-shod, make the going in this part of Alberobello exceedingly rough for wheeled traffic (see, also, illustration, page 253).

habitations, but in reality the explanation lies in the tiller's necessity to rid his land of rock, so that he may cultivate its rich, lime-laden soil.

I discovered in the cool interior of the first trullo I entered that the thick walls serve to keep out the blistering heat of summer, and the hospitable padrone said that in winter they conserve every degree of precious heat given off by the handful of coals in the solitary fireplace.

Originally the walls were circular, and they are so even now in the humbler single-room cottages. The better and prevailing pattern, however, is a walled rectangle supporting the cone.

These country cottages are everywhere of one story only, which accented my surprise in often finding simple, narrow stone steps attached to one end of a wall, which have, however, no contact with the interior of the house. They lead only to the exterior margin about the base of the conical roof, for purposes unexplained and
ALBEROBELLO HAS LONG HAD ITS ROW HOUSES

Here is a style of architecture peculiarly adapted to the space-saving device of building homes with party walls. However, each of the trulli on this crowded street in the monument zone has its separate conical roof adorned with a conventional design (see text, page 251).

INTERIOR ARRANGEMENTS COMBINE UTILITY AND GOOD TASTE

Into one side of this room of a three-part trullo, two bed alcoves have been built by constructing deep arches in the thick wall and then closing up the recesses at the back with single tiers of masonry. Such sleeping quarters are found in nearly all of Italy's conical houses (see text, page 252). Stone slabs form the floors.
which I could not imagine, unless they were used as a convenience in going up to adjust any loose stone in the cone.

ONE DOOR, PRACTICALLY NO WINDOWS

Nowhere in trulliland did I see more than a single entrance door in the entire walled circumference of even the largest trullo.

Of windows, even under a group of cones indicating several rooms, there are few worthy of the name. Occasionally an opening appears in the wall, but it is rarely more than 15 inches square, and the wall about it is so thick that only a minimum of light and not any sunshine can enter.

When I looked through such a window I could believe that I was looking through a rectangular pipe, and the scrap of landscape in the distance suggested the reflection of a kodak finder.

On entering a trullo I took off my hat, but not more for courtesy than from necessity, for the door is generally not more than the height of a south Italian's head and the lintel is horizontal. The variation on this, in the more pretentious trulli, is uniform. It opens for a deep round arch. The inner end of this arch is walled and a thin secondary wall is pierced by a small rectangular door (see page 251).

The stones are laid flat, without mortar or cement, and there is no suggestion of a keystone. How, then, is this conical dome sustained? I climbed the outer stairs and circled many a cone in a vain effort to solve the problem. Even when the shadowy interior of such a cone is not plastered, I could make out nothing from the inner edges of the stones.

Professor Grassi and the padrone of such a trullo enjoyed seeing me baffled. I discovered them exchanging winks. Well, what was the answer?

They led me to a trullo in course of construction on a neighboring hillside. The explanation, like the explanation of many other marvels, was simple. The contadino and his two sons chiseled each and every stone in keystone fashion. They laid them circlewise in an ascending and diminishing spiral. Every stone in the dome of a trullo is a keystone, for each one
TRULLO CONES CAP THE SPIRES OF SANT' ANTONIO

In erecting this new church, the architect worked out a plan by which the edifice combines the traditional architecture of the district with that of formal ecclesiastical buildings. With the parish priest (foreground) is the young mayor of Alberobello.
WINDOWS ARE FEW IN TRULLI-LAND

When the peasant builds his house, he constructs arches as means of ingress and egress and later sets into them his rectangular doors (see text, page 240). The square-cornered entrances shown here are somewhat rare. Because of the thickness of the walls, often 5 to 7 feet, the interiors are dark. Boys find the stone roofs of Alberobello easy to scale.

wedges the others. This geometrical construction makes it more solid than cement.

Another astonishing thing I found in this incomplete trullo is that the rough, heavy slates are usually laid two and often three stones to the width of a course, the courses circling and narrowing in diameter as they approach the top.

CRUDE DECORATIONS FOR THE EXTERIOR

The higher and more slender the cone, the more beautiful and graceful it is; but it is the squatting cones which especially excite wonder as to how these dry, unkeystoned structures hold themselves up.

The Apulian is fond of decorating the exterior of his trullo, but his resources seem few and his results are primitive. He generally finishes off the apex with a sort of button of cement. Occasionally this gives place to a sphere, or a cross, an acorn, a pine cone, or even a vase form, and I saw rare instances of such employment of the image of a saint or of a cement eagle with folded wings (see pages 230, 231, 244, and 248).

The only other method of decoration is to whitewash certain of the stone ends on the rise of the cone, and thus pick out designs, in rude patterns, visible for some distance across country. Most often the design displays the owner’s or dweller’s
own initials in letters three or four feet high; or a cross, frequently with strangely drooping arms; or a single letter M, a pious offering to Mary, the Madonna, sometimes with the lower ends of the perpendiculars of the letter extended downward and drawn together in curves, making of it the suggestion of a heart; and I saw two circles with a perpendicular line drawn through them, much like the outline of two apples on a spit.

Sometimes the dweller in a trullo will indulge himself so far as to outline a great cross or a two-arm amphora with his initials on either side of it; but among these simple people this is considered ornamentation carried to the point of ostentation.

If the owner have a wall-top margin around the base of his cone, and if he be untidy enough to let dust accumulate there, Nature sometimes adds a note of decoration. The winds that catch up the rich, dry earth also catch up seed and pollen with it; and when, after many years, perhaps, the deposit becomes thick enough to sustain an ever-so-delicate root tendril, the spring rains and summer sun draw out delicate leaves and blossoms, and many a trullo's margin is feathered with slender blades of grass, and with the blue and red and yellow and purple blooms of wild flowers, producing a gay floral cornice (see Color Plate IV).

I found on entering a trullo, whether of one or more rooms, that the stone fireplace is directly opposite the door. Here the kettle is set steaming, the meals are cooked, and in cold weather the family huddles for the sake of any warming radiation in the little pit of coals.

If the farmer be poor, his bed is pitched in a stone alcove in the wall, and, as this is a poor country, the alcove beds prevail. In the houses of the well-to-do the beds, whether out in the room on their own frames or in alcoves on a stone support, all seemed broader than they were long. Generally they were piled high with feather tick and puffy comforters (see page 248).

The floors are limestone slates like the walls and cone, roughly laid in general,
STEPPING-STONE BRIDGES CROSS THE LOWER STREETS

Heavy rains sometimes make shallow rivers running through the Alberobello market, and the townfolk have constructed raised walks across the roads (see, also, page 247). Similar devices are found in Pompeii.

TRULLI SHOPS IN ALBEROBELLO

Though business buildings in the newer part of town may be of modern architecture, some of the smaller stores in the old section are housed in “stone beehives.”
DOUBLE TRULLI ARE Seldom Seen

Buildings with separate cones for each room outnumber the type in the center by fifty to one. This double structure has two outside entrances, with no inner door connecting the chambers (see text, pages 234 and 258).
IN THE DISTRICT AROUND CISTERNINO ONE SEES NO BUILDINGS BUT TRULLI

The extent to which this style of architecture predominates in the rural districts is evident from this view. In the left background lies Cisternino. Like all towns in the trulli region except Alberobello, it has only flat roofs.
THERE IS LIVELY BARTER AMONG TRULLI FOLK ON MARKET DAY

Every Thursday the farmers from outlying districts bring their produce to the public square of Alberobello.
THRONGS JAM THE NARROW STREETS OF ALBEROBELLO ON FÊTE DAYS

The figures are borne out of the church in procession. In this part of the town the trulli occasionally rub walls with more elaborate buildings.
and are covered with nothing more than an occasional straw mat or more rarely with a scrap of carpet.

In passing from one room to another, I was struck with the extraordinary thickness of the walls, giving every interior doorway the depth of a passage. This is because a trullo is in general built by the addition of room after room, one at a time, on the original unit, and the wall between rooms was at first an outside wall.

A man anticipating the addition of other rooms to his trullo constructs a closed archway on the side against which he later expects to build. When he adds another cone—that is to say, another room—he breaks down the filling of the arch; but I do not remember to have seen any doors swinging in these deep interior doorways.

If a trullo have more than one door admitting from the outside, then any such additional outside door admits into a room which, though structurally attached to the general unit, is without access to it by a door through an inner wall. Such a room is usually devoted to live stock, tools, grain, or other storage.

Under the several domes of a trullo unit I felt in the presence of a primitive suggestion of the vaulted chambers which in Gothic architecture flowered with such beautiful lines and decorations. In the better houses only the walls and the high, pointed ceilings are plastered over and whitewashed.

**EVERY CELLAR IS A DOUBLE WINE JAR**

In every hut we entered we were offered wine and other refreshments with a simple but gracious hospitality. The head of the house, instead of going to a sideboard, would get down on his knees on the floor and displace a stone flag a generous foot square—the opening to a stone, cement-lined well or tank. A wall divided the tank into two chambers. In one he kept white wine and in the other red.

He would let down a hollow reed and by suction draw up the liquid into a carafe, from which he would serve it to us. It was a mild wine or I should not have survived the etiquette which demanded that I sample the hospitality of every trullo I visited.

From Martina Franca the way north
PLOWING IS POSSIBLE ONLY IN CLEARED FIELDS

Once free of rocks, however, the soil near for its high calcium content insures fertility, though it seems a nuisance,

was through a continuing countryside exclusively of scattered cones—grotesque, fantastic, and bizarre—until at Alberobello I found the single instance of trulli appearing in the agglomeration of an actual town. Here is a compact forest of stone cones. The streets are lined with them; every opening presents them in perspective; they huddle shoulder to shoulder, wall to wall, in all shapes and sizes and groupings.

When, at sight of this strangest of all European towns, I exclaimed: "Well, seeing this for the first time is an experience I can never have again!" my cicerone rebuked me, without intending, with the pleasant, philosophical rejoinder:

"But the memory of it is something no one can ever take from you."

TWO-STORY TRULLI ARE FOUND IN TOWN

Alberobello presents variations of the trullo not seen elsewhere. Here, having come to town, the modest one-story cottage seems to have succumbed to the exigencies of a crowded life, and occasionally so far loses its homely countryside character as to take on a second story; but its original character clings to it in the thick walls and the conical roof.

Here, too, are examples of the change which, in the 17th century, in a few instances, the trulli, in exchange for a second story, gave to the town built with caves. The roofs of such houses are here laid with the native flat stones, in dry courses, just as in the cones, and, as in them, kept in place by a nice adjustment.

From all the trulli of this town of trulli, where every size, and age, and shape, and decoration is represented, the Italian Government has picked and crowned the largest of them, the so-called Trullo Sovrano, to be a national monument, and thus to it extends its protection from decay, destruction, or any change whatever, in so far as it can control.

Yet the trulli seem out of place in town. They belong in the stony fields and on the plowed hillsides, from which they rise so naturally, and to the exclusion of any other type of building. There, though rough and crude, austere, and for the greater number unadorned, they are some-
how beautiful, as almost any object may be in its proper setting, from which it has risen in obedience to a natural law. This is their own land; here they belong.

It is in approaching the edge of the Piana dei Trulli, beyond the little town of Putignano, the first reappearing flat-roofed farmhouses seem out of place, intruders and somehow ugly.

Coming down and out of the Murgiai foothills here, a little nearer to the Adriatic, I thought the rocky emanations were less insistent in the soil. Just in proportion as the rocks became fewer and disappeared, so did the trulli thin out and disappear from the landscape. When Conversano was reached, there was scarcely a cone in sight, though the sea was, in sunlit glimpses where the hills dip low.

Travelers on the coast roads, motor or rail, between Bari and Brindisi may observe some detached single-cone trulli. They may be puzzled to see other small circular stone and cement structures consisting of from one to three or four shallow truncated cones superimposed one on the other, each cone of lesser diameter than the one below.

In these odd little buildings the fishermen merely store nets, or the farmers use them as tool houses or as temporary shelters in bad weather. As human habitations, the trulli are peculiar to the highlands a few miles inland, the district which they adorn in such bewildering numbers, to which they give their name, and which, to me, will always be unforgettable.

ORGANIZED FOR "THE INCREASE AND DIFFUSION OF GEOGRAPHIC KNOWLEDGE"

TO carry out the purposes for which it was founded forty-two years ago the National Geographic Society publishes this Magazine monthly. All receipts are invested in the Magazine itself or expended directly to promote geographic knowledge.

ARTICLES and photographs are desired. For material which the Magazine can use, generous remuneration is made. Contributions should be accompanied by addressed return envelope and postage.

IMMEDIATELY after the terrific eruption of the world's largest crater, Mt. Katmai, in Alaska, a National Geographic Society expedition was sent to make observations of this remarkable phenomenon. Four expeditions have followed and the extraordinary scientific data resulting hence given to the world. In this vicinity an eighth wonder of the world was discovered and explored—"The Valley of Ten Thousand Smokes," a vast area of smoking, spouting fumaroles. As a result of the Society's discovery this area has been created a National Monument by proclamation of the President of the United States.

AT an expense of over $50,000 the Society secured a notable series of expeditions into Peru to investigate the traces of the Inca race. Their discoveries form a large share of our knowledge of a civilization waning when Pizarro first set foot in Peru.

THE Society also had the honor of subscribing a substantial sum to the expedition of Admiral Perry, who discovered the North Pole, and has contributed $35,000 to Commander Byrd's Antarctic Expedition.

NOT long ago the Society granted $25,000, and in addition $75,000 was given by individual members to the Government when the congressional appropriation for the purpose was insufficient, and the forest of the giant sequoia trees of California were thereby saved for the American people.

THE Society has conducted extensive excavations at Pueblo Bonito, New Mexico, where prehistoric peoples lived in vast communal dwellings before the days of Columbus; it is sponsoring an ornithological survey of Venezuela, and is maintaining an important photographic and botanical expedition in Vietnam, Formosa, China.

To further the study of solar radiation in relation to long range weather forecasting, the Society has appropriated $65,000 to enable the Smithsonian Institution to establish a station for five years on Mt. Bruekow, in Southwest Africa.

There is true economy in the purchase of a good used car from a reputable merchant.

To keep pace with life today you must have an automobile—new or used. Used cars meet this need for thousands of people because reconditioned cars are either lower in price; or they are finer built than a new car at the same price and therefore provide transportation of a higher and more impressive quality than the owner would otherwise feel he could afford.

A wider recognition of these facts is rapidly increasing the used car business. People from all walks of life are buying used cars—doctors, lawyers, engineers, business men—more than ever before and more representative of all the professions.

One of the first things every used car buyer should consider is the reliability of the dealer. Buy from the man with an established business in new cars of recognized quality—a merchant who has a reputation to maintain.

The very fact that Cadillac-La Salle dealers have been selected to sell cars of such high quality is a guarantee of their integrity and capability as business men, whether your transaction with them is for a new or a used car.

Because of the position Cadillac and La Salle occupy in the field of finer cars, their dealers have used car stocks in which many standard makes are included. If what they offer does not include the particular car you seek, it is quite likely they can direct you to it.

These Cadillac-La Salle men want your good will and, to deserve it and keep it, they condition their cars and price them reasonably. They are recommended to everyone without reservation.

The greater beauty, comfort and durability of Fisher Bodies have always quite properly been emphasized, but the really vital thing about them — today more than ever in the past — is that they give a car greater value. That value extends throughout every Fisher Body and reveals itself convincingly in greater beauty, comfort, durability and strength. General Motors cars — and those cars only — bring to the motor car buyer the benefits of Body by Fisher. This joining of a higher value body with a higher value chassis completes a car of so much greater value, that to most buyers it will seem obviously futile to seek its equal anywhere but in a higher price field.
The Byrd Expedition chooses these books

P. F. Collier & Son Company
New York.

Gentlemen:

In fitting out the Byrd Antarctic Expedition for a two-year scientific research of the Antarctic, members of the expedition have suggested that we include in our library Dr. Eliot's Five-Foot Shelf of Books.

Books will play an important part in the entertainment of the personnel, particularly when the expedition winters on the ice barrier through the six months of total darkness during the Antarctic Night.

We should like to carry into the Antarctic, along with your good wishes for the success of the expedition, a set of The Harvard Classics.

You can appreciate, too, aside from the endorsement value of our including The Harvard Classics in a library necessarily restricted in size, that the sixty men who will accompany Commander Byrd on this expedition will while away many hours of recreation and profit immensely by the fund of information contained in your volumes.

Trusting that we may have your cooperation,

Yours very truly,

BYRD ANTARCTIC EXPEDITION
BUSINESS MANAGER.

This letter was written to P. F. Collier & Son Company by the Manager of the Byrd Expedition, asking that the Harvard Classics be added to their very limited library. The Publishers were pleased to serve Commander Byrd and his men.

The selection of Dr. Eliot's Five-Foot Shelf of Books is typical of the vision with which the whole voyage has been planned. Men of the highest type need the best possible reading recreation, and the Harvard Classics have brought inspiration and pleasure to hundreds of thousands.

302 Immortal Authors

Men in the ice floes of the Antarctic need be no more remote than the people in our civilized urban world, so far as their reading is concerned. Although the explorer is limited to the few books he can take with him, we of the busy world may be so hopelessly lost in the millions of books around us that we miss the truly great ones.

The explorer must choose. And the Byrd Expedition has chosen The Harvard Classics.

Because Dr. Eliot, forty years President of Harvard University, recognized the need for easy access to the best books, he assembled in one convenient set the works which have everlasting value, the books that stimulate, inspire, and advise. In these volumes are included the writings of 302 immortal authors.

Through Dr. Eliot's Five-Foot Shelf people have found that the classics are not dull, but intensely stirring; not beautiful antiquities, but lively, stimulating, modern thought with vital application to everyday life.

P. F. Collier & Son Company has published good books since 1875. By the famous Collier plan, you can pay for these books while you read and enjoy them.

THIS FREE BOOKLET

Before you spend another penny for books, get a copy of "Fifteen Minutes a Day"—the booklet that tells how to turn precious spare time into profitable entertainment, growth, and increased power. It's ready and waiting for you. Sending for it does not obligate you in any way.

Announcing the New Dollar-Size American Express Travelers Cheque

Perfectly safe, worry-proof travel funds! Universally spendable and of extra service to their owners. These are the reasons why millions of travelers in the past thirty-nine years have carried two billion dollars in American Express Travelers Cheques.

And now another advantage! They have been made smaller, more compact, and less bulky. On your journeys this year, encumbered as you may be with tickets, passports, money, licenses, and other travel accessories, you will welcome this new dollar-size American Express Travelers Cheque. Enough money for almost any trip will fit cozily into a woman's handbag like a compact, or into a man's pocket like a card-case.

The general appearance of the Cheque is unchanged—it has the same blue color and the same signature method of identification. With it, too, goes the Helpful Hand of American Express Service in foreign lands which is automatically extended to you when you carry this blue paper money.

These Cheques insure your money until spent. They are issued in denominations of $10, $20, $50, and $100. Cost 75c for each $100. For sale at 22,000 Banks and at offices of the American Express and Railway Express Agency. Merely ask for the blue American Express Travelers Cheques.

Steamship tickets, hotel reservations, itineraries, cruises and tours planned and booked to any part of the world by the American Express Travel Department.
Buying a J-M Roof is buying Exemption

Keeping out the weather is but a detail of the job done by fireproof long-lived J-M Roofs.

It is not merely to turn the weather that you buy a roof. You want freedom from worry about fire, or maintenance costs. You want the certainty that your property is protected for years to come. You want, too, a pleasing appearance.

You can turn to Johns-Manville with the assurance that whatever the building, whatever its purpose, wherever it is located, there is a J-M roof exactly suited to the job of protecting it for the time you want it protected.

When you buy a Johns-Manville roof you are in good company. Hundreds of buildings belonging to the most exacting owners have been roofed for years by Johns-Manville. The American Can Company roofed the great plant shown, and many others, with J-M roofing. This roofing was selected after consultation with J-M Roofing experts, whose impartial advice on roofing problems is available to any building owner, architect, construction engineer or anyone else interested in roofing. Why not take advantage of this expert advice?

More than 20 Types of Roofs

Roofing is often a complicated problem. To make certain of providing the right materials for every job, Johns-Manville has perfected more than twenty distinct types of roofs. Not only does our expert help in the selection of the right roof for a given purpose, but a J-M inspector checks every detail during application and inspects the finished roof at frequent intervals thereafter.

Johns-Manville roofs include asbestos or asphalt roofs, smooth or gravel-topped—and our method of operating makes certain that your building will be covered with the right roof. As an added factor to our own guarantee, every J-M roof is guaranteed by the National Safety Company for an agreed term of years.

There is a perfectly designed J-M Insulation for every purpose, and for every temperature, from 400° F. below zero to the highest industrial temperatures. Noise, the enemy of efficiency, the destroyer of nerves, has been controlled in thousands of offices by J-M Sound Control materials and methods. Through these, and scores of other products, Johns-Manville contributes directly, or indirectly, to the welfare and comfort of millions of people.

MCMLII.McMillan-Kamary Flying Service
ROOM AND BATH
ROUND THE WORLD

$1370.

A palatial Liner becomes your home for 20,230 miles.
You have a large outside room with twin beds, and your private bath. Delicious meals, interesting friends. Your living room window will look out upon the great ports of the world, which you will visit—Yokohama... Kobe... Shanghai... Hong Kong... Manila... Singapore, etc... And this acme of travel experience, a trip Round the World, is now yours in luxury at the rate of $16.11 per day. Room, bath, meals—and Round the World!

You are free to stop over where you like, as long as you like. Your ticket is good for two years. Visit any land that interests you, continue your journey on another President Liner as you would on another train. No other plan of world travel offers you such freedom, such comfort, such consideration for your personal wishes.

This is your world—give yourself the experience of a lifetime and see it! Visit lands you have read about, hear others discuss, and longed to see in the real. And go, not as a scheduled tourist, but as a traveler—with home always in the harbor when you want it!

Every week a palatial President Liner sails from Los Angeles and San Francisco—via the Sunshine Belt—for Honolulu, Japan, China, Manila and thence every two weeks to Malaya—Java nearly—Ceylon, (India by Pullman overnight), Egypt, Italy, France, New York.

Fortnightly sailings from Boston, New York via Havana, Panama to California, and Round the World.

Fortnightly sailings from Seattle and Victoria, B.C., for Japan, China, Manila and Round the World.

($1370 up—fare provides First Class accommodations in twin bed stateroom, bath and meals, also rail fare from any direct line point in the U.S. to Los Angeles, San Francisco, Seattle or Victoria, B.C., and back to starting point from New York.)

Summer in the California that’s centered by San Francisco

Where thousands came once to visit and returned again to live as they had only dreamed of playing—there surely, you’ll enjoy this summer . . .

California: where one day’s lure is high-hilled San Francisco—the next your choice of half a hundred other fascinating places, down beside the sea or thrust by mountains into philosophic skies!

California calls you to a freedom for the body and the mind. . . calls you from Yosemite and Lake Tahoe, from mountain lakes and streams, and Redwood forests; debonair Del Monte and the like, where golf is played above a yacht-flecked ocean; and from San Francisco, with its secret . . . of buoyant, joyous living.

San Francisco, America’s coolest summertime city, is right in the center of this great vacationland and part of it . . . a worldly, cultured, cosmopolitan part.

Here is head-quarters city for the business of the whole Pacific Coast. And here a future that perhaps you’ll want to make your own. The coupon below will bring an illustrated book that is sure to quicken your imagination.

SAN FRANCISCO
IN CALIFORNIA—“WHERE LIFE IS BETTER”

Beginning May 15, low roundtrip excursion rates will be in effect to San Francisco and the Pacific Coast on all railroads. The Victory and Lincoln Highways will be in good condition. Or come by air, or by steamship via Panama Canal.
THE EUROPEAN TRAVEL SENSATION OF 1930!

Champs Elysées, Paris

THE PASSION PLAY
and Five Countries by Motor

ALL EXPENSES $395

See Normandy, Paris, Burgundy, Switzerland, Austria, Oberammergau and the Passion Play, Munich, Nuremberg, Heidelberg, Cologne, Brussels, Antwerp.

"ALL-OF-EUROPE" TOUR
by Motor, including Passion Play

ALL EXPENSES $995

Here is an ideal tour for the traveler who wants to see all of Europe quite thoroughly in two and a half months. Itinerary includes England, Holland, Belgium, Germany, Austria, Hungary, Czechoslovakia, the Passion Play, Switzerland, Italy and France, with special emphasis on the Shakespeare Country, London, Rhine Region, Berlin, Tyrolian Alps, Grand Alpine Tour, Italian Lakes and Hill Towns, Rome, Florence, Venice, Naples, Italian and French Rivieras, Route des Alpes, the Chateau Country and Paris.

Ask for "Booklet E 30" describing these and hundreds of other fascinating tours priced from $335 to $1000, and ranging in length from 25 days to 74 days. Sent free on request.

Service for Independent Travelers in Europe

Let The Travel Guild give expert counsel in planning your itinerary, purchase all your tickets at regular tariff rates, issue coupons covering your entire journey and serve you at stations and in hotels abroad. Ask for Booklet "FA" giving full details of this service, together with suggested itineraries.

HOUSE PARTY Tours
through Europe by MOTOR
at Astonishingly Low Prices!

NEVER before have conducted motor tours of Europe been available on such an extensive scale. And never before have prices for motor travel in Europe been so inexpensive! With the announcement of its 1930 programs, The Travel Guild launches a new era in European travel. Luxurious motor journeys now become the outstanding feature of The Guild's famed House Party Tours. Our popular Collegiate Tours will be continued by rail.

Now you may see Europe as the leisurely "de luxe" traveler does—but inexpensively, from the seat of a comfortable motor coach which carries you on highways and by-ways to all sorts of fascinatingly interesting places... the quaint little towns and romantic countryside, as well as the great, glittering capitals!

Small parties. Average motor journey, seventy-five miles a day. Cars depart from your hotel; take you direct to your next stop... over great boulevards, charming country highways, splendid scenic roads! Luncheon en route at picturesque inns. Generous opportunity for individual sightseeing, shopping and idling.

House Party Tour prices include all necessary expenses on ship and shore: round trip ocean passage on famed Canadian Pacific steamships; accommodations and meals at good hotels; motor trips and sightseeing programs; all tips abroad; admission to galleries, museums, etc.; and services of couriers, lecturers, chauffeur and guides.

This year of all years is the time to go to Europe! Passion play at Oberammergau. International expositions in Belgium. Interesting events elsewhere, throughout Europe. To really see Europe, see it by motor, with The Travel Guild.

All along the highways enroute you will see the natives in their quaint costumes... will learn how they live and how they look. You will see and know Europe as only the most seasoned traveler does!

A LITTLE MORE than a year ago we wrote as a prophetic statement that American air-lines would soon be reaching down to the mainland of South America! Today big tri-motored, all-metal Ford planes are not only reaching the mainland of South America, from Panama, the West Indies, and Florida, but they are flying on, farther and farther southward, where there are no roads, no trails, and man can only cross geographical barriers by taking wings across the sky...

Pan-American air-liners, using only multiple-engined planes of large passenger capacity, are winging over the islands of the Gulf of Mexico and the countries of the mainland. Well-organized tours, operating in conjunction with railroads and steamships, reach Nassau, Mexico, Cuba, Haiti, Dominican Republic, Republic of Panama. In addition, there are 4000 miles of airways over which the Pan-American carries mail to Honduras, British Honduras, Nicaragua, Costa Rica, Colombia and Curacao.

Over the South American mainland the Pan-Grace lines, cooperating with the Pan-American, are sending Ford planes speeding across the jungles and mountains of Venezuela, Colombia, Ecuador, Peru and Chile on regular schedules.

Ford planes have proven to be most logical vehicles for these great pioneer lines that must operate over enormous distances and hazardous country with the safety and efficiency of railroads.

Ford Motor Company
Visitors are always welcome at the Ford Airport at Detroit

The Ford Plane

The Ford plane is planned, constructed and operated as a commercial plane. Built of corrugated aluminum alloys, it has great structural strength, unequalled durability, and is most economical to maintain in operation. The uniformity of its material is determined by scientific test. All planes have three motors in order to insure reserve power to meet and overcome all emergencies. The engines may be Wright or Pratt & Whitney, air-cooled, totaling from 900 to 1275 horse-power.

Ford planes have a cruising range of from 580 to 650 miles at speeds between 55 and 135 miles per hour. Loads may be carried weighing from 3670 to 6000 pounds.

The human capacity of these planes is 13 to 13 passengers and a crew of two (pilot and assistant). Each plane is equipped with a buffet, toilet, running water, electric lights, adjustable chairs.

The price of the Ford tri-motored, all-metal plane is exceptionally low because of its highly scientific methods of commercial production. Price is $42,000 to $55,000 at Dearborn.

Ford branches will be glad to give you information on the Ford tri-motored, all-metal plane in all models.
Next to Boston’s TEA-PARTY

was the Party Boston gave CUNARD

T was a momentous day—that July 19th, away back in 1840. How the people rejoiced. How Boston celebrated. Full 20,000 came to see and to cheer—"despite the dank fog of the night."
The cannonading was terrific—Gun powder was burned in immense quantities. And the great Banquet the Select-men gave to Samuel Cunard, Cunard—
the Nation’s Benefactor; Cunard—The Empire Builder they hailed him.

And Ezra Gannett preached an entire sermon on the event at Federal Street Meeting House—Not since the coming of the Mayflower—200 years before, had a ship meant so much; for "never before had a vessel of such class, size and stateliness appeared in our Port." And wonder of wonders—a Steam ship—a palatial colossus of a Thousand tons—and a full 270 feet from stem to stern.

And so it was that Ezra Gannett, in Federal Street Meeting House called the People for "Prayer and Rejoicing." And these stirring words he spoke on the coming of the Britannia: "It illustrates the power and wisdom of the Creator*** With the coming of the Britannia our wealth will be augmented, our activities quickened, and means of employment created

*** It means that Boston is destined to become a place of great business, of large population and great wealth *** The coming of the Britannia will confirm the harmonious relations that exist between our country and Europe *** No event since the commencement of the present century involves more important consequences to this Nation than Mr. Cunard’s Steam ship Britannia *** The establishment of regular steam connection between Boston and Liverpool. Its effect will be seen in the industry, wealth, population, manners and general culture of our inhabitants *** A Landmark in the Progress of our Country."

And now after 90 YEARS

the 1,000 ton Britannia evolutes into the regally sized — royally apperelled BERENGARIA, AQUITANIA, MAURETANIA —Cunard’s famous express service. The crossing is cut to 5 days. What a history is this of Cunard accomplishment.

CUNARD

1840 . NINETY YEARS . OF . SERVICE . 1930

A copy of the sermon of Ezra Gannett, upon "The Coming of the Britannia" in facsimile form, as originally printed in 1840, will be sent on request, Cunard Steam Ship Co., Ltd., 25 Broadway, N. Y.
NOW READY FOR YOU
The Education of the Great Universities
In the Simplest, Handiest Form yet devised

—Completely NEW
ENCYCLOPAEDIA BRITANNICA

NOW all the world's knowledge can be yours in the simplest, handiest form yet devised. Simple because all the searching and studying has been done for you. Handy because you can stay right in your own home and range through every subject known to man.

This completely new Britannica is a "new model", a $2,000,000 work, new in plan and purpose. Never before has knowledge been made so accessible. Never before has it been presented in a form so convenient, so authoritative and yet so fascinating.

A New and Different University

The very men whose wisdom you would share at the great universities have written this newest, greatest Britannica.

Here is the learning and experience of 3,500 supreme authorities. Knowledge so humanized, so "live" and vivid, that it reads like a novel. It keeps you fascinated—hour after hour.

Latest Discoveries

It is education of a new type that the new Britannica gives you. Education brought right into your home for your everyday use.

Open any one of its 24 volumes. Here is the latest information in every field. The secrets of the laboratory, the newest discoveries of study and seminar, the world's remotest wonders—all are yours on the instant.

The 15,000 illustrations are an endless treasure of interest and education, a unique, colorful gallery of art and nature and science.

For All the Family

This is literally a book for every single member of the family. "It satisfies the needs of curious readers from eight to eighty," says James Harvey Robinson. It is a help-book indispensable for your children.

Not a question they can ask, not a point you can wonder about, but the new Britannica settles it at once, once and for all.

EXEMPLARY LOW PRICE

YET the cost of this extraordinary knowledge book is extremely low. Mass production on a scale never before possible gives you this set at less than a third of what it would otherwise cost.

Make sure of your new Britannica now—at the present low price. Easy payments if desired. An initial payment of only $5 brings the set with mahogany bookcase to your home.

56-page BOOKLET FREE

It includes specimen pages, maps and color plates from the NEW Britannica. We will gladly send you your copy without the slightest obligation on your part.

NOW—while this page is here before you—tear out the coupon and send it in.

100% Automatic Refrigeration
and record fast freezing with
Ice-O-Thermic tubes

1. Ice-O-Thermic Tubes—Give new
ease freezing of ice
cubes. Fully automatic
in every phase of refi-
giration, solid storage and
freezing. Ice capacity
to 15 pounds. Faster
freezing of ice cream
and desserts.

2. Super-Auto-
matic Refriger-
eration—Food
compartments always
between 40 and 50 de-
grees. Not affected by
lower temperature of ice
chamber.

3. Cold Storage
Compartment
For Meats,
Game, Etc.—Larger
size. Kelvinators
have separate compart-
ment where perishable foods
Can be kept indefinitely.

We invite every family to think of an
electric refrigerator 100% automatic in
freezing, in refrigeration, in cold storage.
A refrigerator that freezes ice cubes in an
amazingly short time. One that holds
scientifically correct cold in the refrigerat-
ing and cold storage compartments for
weeks and months without attention or
adjustment by the user.

With its exclusive new Ice-O-Thermic
Tubes, Kelvinator now achieves a goal of
super-automatic operation and quick
freezing toward which all electric refriger-
ation has worked for years.

With far finer performance
and far finer mechanical
features, it combines the

beauty and ruggedness of staunchly built
metal cabinets with roomy, sanitary all-
porcelain interiors, easily cleaned and
kept clean.

If you appreciate the countless benefits
and economies of electric refrigeration
brought to a new high peak of automatic
service—you will equip your
home at once with one of the new
Kelvinators, sizes from 4 to 22 cubic feet.
All can be bought on Kelvinator's low-
cost ReDisCo monthly budget plan
through authorized Kelvinator dealers.

KELVINATOR CORPORATION, 14258 PLYMOUTH ROAD, DETROIT, MICHIGAN

THE NEW SUPER-AUTOMATIC KELVINATOR
Every Spring discerning travelers go to Europe by the Raymond-Whitcomb Mediterranean Cruise. ★ Somewhat longer than the "ferry crossing," but with advantages that more than compensate for the extra days . . . ocean passage by the favorite southern route — on a specially chartered liner that carries only 400 passengers (all first cabin) at a time when the regular southern liners are usually crowded . . . stops en route at a dozen cities, some of them — like Palma and Valetta — well off the usual lanes of travel . . . sight-seeing drives on shore . . . excursions into the interior to such cities as gay Seville and historic Carcassonne. ★ But not much longer . . . only three weeks from New York to Naples — favorite beginning for Spring travel in Italy . . . less than four from New York to Venice — convenient starting point for trips to Oberammergau for the first performances of the Passion Play. ★ The cruise ticket includes homeward passage at any time.

RAYMOND-WHITCOMB

MEDITERRANEAN SPRING CRUISE

Sailing April 8, 1930, on the 20,000 ton Cunard Liner, "Carinthia." Rates, $725 and up.

A six weeks' (from New York to New York) cruise through the Western Mediterranean. It will visit the Riviera, Algiers and Tunis; Cattaro and ancient Ragusa in Jugo-Slavia; Malaga, Cadiz and Barcelona; Naples and Venice. There will be inland trips to Seville and to romantic Carcassonne. Three famous Mediterranean islands are on the route — Sicily, with Palermo and Taormina; Malta, with walled Valetta; Majorca, with fascinating Palma.

Send for the Booklet — *MEDITERRANEAN SPRING CRUISE*'

NORTH CAPE CRUISE

The favorite summer cruise. More complete this year than ever before — with visits (without extra charge) to Moscow and Leningrad — as well as to Iceland, the North Cape, the Norwegian Fjords, Stockholm and Copenhagen. Sailing June 24, on the S. S. "Carinthia." Rates, $800 and upward.

Spring's Awakening in JAPAN

Make your rendezvous with the world-famous cycle of blossoms—the peach and the pear in March, cherry blossoms in April, azaleas, wisterias and peonies in May.

Absorb the loveliness of the immemorial past; and find everywhere the benefits of modern progress in comfortable American hotels, hurrying trains, spacious streets and buildings. There are little tea-houses and enchanting parks and tennis and golf the year around.

Fascinating Japan, land of colour, charm and courtesy, where the East blends with the West and the Past with the Present.

Steamship Lines operating between the United States and Japan: Nippon Yusen Kaisha, Osaka Shosen Kaisha, American Mail, Canadian Pacific, Dollar Line.

For complete information on the many-colored marvels and modern diversions of Japan, China, Korea, Manchuria, address:

JAPAN TOURIST BUREAU

or any tourist or steamship agent.
Don't cover the worn spots
..make them look like new!

Here is an astonishing machine that
scrapes, waxes and polishes your floor
at a fraction of the usual cost

An amazing new machine which plugs
into an electric light socket like a vacuum
cleaner, and requires no more skill to operate,
enables you to do the job yourself.

It takes off completely the old varnish or
shellac... sandpapers the floor to velvet
smoothness... vigorously rubs in coats of wax
... then polishes the wax to a lovely lustre.

The change in your floors astonishes you.
They look like new.

Not only that—but they stay that way, for
the machine takes care of them forever after.

A few minutes' occasional polishing, an an-
nual or semi-annual re waxing (operations ab-
surdly easy), and your floors become the con-
stant envy and admiration of your friends.

In addition, the Ponsell Floor Machine takes
care of your other floors.

It gives linoleum a lustre surpassing anything
you have ever known... a surface so immacu-
lately smooth that dust and dirt have a hard
time sticking to it. The machine scrubs tile,
cement, or any other kind of floors as they
never could be scrubbed by hand, and without
the least splashing.

We have branch offices in 24 cities ready to
serve you. Upon request, we offer a free de-
monstration in your own home. Or if you are too
far from our nearest branch, a 10-day free trial.

But first write for a com-
plete description of this mar-
velous little machine, and
what it does. Tear off the
coupon now as a reminder,
and then mail to us. We prom-
ise you an answer promptly.
Don't buy an Oshkosh "Chief" just because it's the thing to do.

IT is quite true that the Oshkosh "Chief" stands high in the social scale. Dukes and duchesses, magnates and millionaires are numbered in the growing list of its owners. And its colorful red-and-yellow stripes are frequently seen on the station platforms at Southampton and Newport.

But don't let the fact that buying a "Chief" is "the thing to do" be the reason for your buying. Buy one, yes, but buy it for the same reason that the magnates and millionaires bought it—because it is the best trunk made, and it pays to have the best.

A descriptive booklet, "Your Home Away From Home," will be sent on request. Address the Oshkosh Trunk Company, 431 High Street, Oshkosh, Wisconsin.
THE COMMAND AND CREW

Personality! That human quality that enriches all contact between man and man... nowhere is it more vividly exemplified than in the command and crew of the United States Lines. Selected for command because of a seven-seas reputation for courage, leadership and resourcefulness. Chosen for service on deck, in salon or in cabin because of an inborn graciousness, civility and tolerance. You'll sense the difference... be conscious of an unobtrusive spirit of highly talented service when you travel to Europe on a United States Liner, be it the Leviathan, world's largest, or one of these magnificent cabin ships—George Washington, America, Republic, President Roosevelt and President Harding. Sail to Europe with superfine service and safety... under the Stars and Stripes!

UNITED STATES LINES

For complete information see your local agent or our offices: New York, 45 Broadway; Boston, 75 State St.; Chicago, 61 W. Jackson Blvd.; Cleveland, Hotel Cleveland Bldg.; Detroit, 1514 Washington Blvd.; St. Louis, Jefferson Hotel; Philadelphia, 1600 Walnut St.; San Francisco, 691 Market St.; Los Angeles, 548 South Spring St.; Minneapolis, 312 Second Ave., South; Seattle, 1337 Fourth Ave.; Pittsburgh, 705 Liberty Ave.; Washington, 1027 Connecticut Ave.; Little Rock, Wallack Bldg.; New Orleans, Hibernia Bank Bldg.

Hold Your Money until this test convinces you

A sales policy that has won millions of friends. Try this remarkable cream 7 days at our expense before you make your decision.

GENTLEMEN:

When we perfected our new shaving cream, we decided upon a daring course. Rather than attempt to force men into buying it through eloquence or printed argument, we staked our whole case on a trial.

We told men, as we tell you here: "Don't buy—yet. Let us prove our product's outstanding merit by sending you enough for a fair test at our risk. You be the judge."

5 Outstanding
Superiorities
1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for shaving.
5. Fine after-effects due to palm and olive oil content.

Millions took us up and Palmolive Shaving Cream is today the world's largest seller. For 86% of those who tested it found what they had long sought. They became wedded to this remarkable new shaving cream.

Please make our test
Now we ask you to mail the convenient coupon for your test. Even if you usually do not send coupons, please mail this one. We promise you great things. But we take the risk of convincing you. Clip it now.

7 SHAVES FREE
and a can of Palmolive
After Shaving Talc
Simply insert your name and address and mail to Palmolive, Dept. M-444, P. 0. Box 373, Grand Central Post Office, New York City.

(Enclosed coupon for picture folder)

Briefly, the Indian-detour is an unusual motor outing in northern New Mexico made conveniently available throughout the year to passengers on Santa Fe transcontinental trains, east or westbound.

The rail journey is broken for either two or three days, as desired. The time is spent by Harveycar motors in traversing scenic mountain routes through the Spanish-Pueblo region centered by Old Santa Fe, for three centuries the picturesque capital of Spanish, Mexican and American dominion in the Southwest. Prehistoric ruins, inhabited Indian pueblos and primitive Mexican mountain settlements are visited under the unobtrusively pleasant and informative guidance of members of the Harveycar courier staff.

Motor transportation, courier service, meals and Harvey hotel accommodations with private bath are included in the individual rates of $10 and $57.50 for the two or three-day outings.

Please send me folders and detailed information.
Typically American in Origin and Principle

No institution or business is more essentially and typically American than mutual insurance. Founded twenty-five years before the signing of the Declaration of Independence — mutual insurance has grown with the country — shared in and contributed to its greatness.

The basic principles of mutual insurance reflect the spirit of colonial America. Born at a time when honesty, sincerity and helpfulness between men was essential almost to existence itself — mutual insurance has adhered to these fundamentals for over 177 years.

Mutual coverage for casualty risks, either individual or corporation, has distinct and measurable advantages for the policyholder.

Mutual casualty insurance companies are corporations owned and controlled by their policyholders. There are no stockholders. Savings effected by careful management are returned annually to policyholders.

An interesting and worth-while booklet on mutual casualty insurance will be sent on request. No solicitation will follow. Address Mutual Casualty Insurance, Room 2200, 180 North Michigan Avenue, Chicago, Illinois.

Savings protection is available for these casualty risks: Workers' Compensation Fidelity Accident and Health Property Damage Automobile (all forms) Plate Glass Burglary and Theft Liability (all forms)

MUTUAL CASUALTY INSURANCE
These Old Line Legal Reserve Companies Are Members of
NATIONAL ASSOCIATION OF MUTUAL CASUALTY COMPANIES AND AMERICAN MUTUAL ALLIANCE

Announcing the NEW WORLD BOOK Encyclopedia

12 Volumes — 8,000 pages — 10,000 illustrations

PREPARED at a cost of over one million dollars, the NEW WORLD BOOK surpasses those earlier editions called by educators and book authorities "the best of non-technical, popular price encyclopedias."

Now twelve volumes instead of ten—thousands more pages—10,000 illustrations instead of 5,000—illustrations as beautiful as those in "National Geographic."

Plus all the exclusive features preferred by millions of readers of the earlier editions: interesting story form, outlines, quiz questions, lists of related subjects.

No wonder an Indiana Superintendent of Schools says "I have no adjectives to do justice to the new edition."

FREE—this beautiful 56 page Book about the NEW World Book

"Camera Shy" subjects easily caught by the **Leica**

Remarkable Compact Camera always ready for instant use

When you have to "shoot" a picture quickly, there is no camera so convenient and dependable as the Leica. Finest pocket or purse—and is so perfected, mechanically and optically, that it makes exceptionally fine pictures under all conditions of light and weather. Photographers, scientists, and explorers favor the Leica—for snapshots, portraits, photomicrography, and more.

Several Leicas are being used by members of the Byrd Antarctic Expedition—others were used on the Graf Zeppelin's flights. A single loading of standard camera film gives 36 pictures, each negative of double frame size. Enlargements to 12 x 18 inches or more preserve and emphasize all details. Not costly to operate. Positive films may be used for screen projection.

See the Leica at your dealer's or write for illustrated Catalog No. 1166.

E. Leitz, Inc., Dept. G-8, 60 East 10th St., New York, N. Y.

Even the healthiest mouth can't afford a cheap dentifrice

IT is a high tribute to Forhan's that people whose teeth are beyond the help of ordinary toothpastes employ this finer dentifrice.

For, as millions know, it gives a double protection. At the same time it cleans the teeth, it helps to give the gums the care they need.

Why, then, should the healthy mouth, the gleaming mouth of youth, have less than Forhan's protection? Isn't it far better to avoid trouble by the help of Forhan's than to use this dentifrice only after trouble has come?

Forhan's was originated by a dentist, R. J. Forhan, D. D. S. He developed a preparation which dentists used in the treatment of pyorrhea. Then, as a further aid to dentists, he embodied the benefit of this preparation in the excellent dentifrice which bears his name.

When you brush your teeth, simple precaution urges that you brush them with Forhan's. Used with massage at the time of brushing, it helps to restore the glow of health to tender gums—aids gums which are firm and sound to keep their health throughout the years.

Forhan's comes in two sizes—35¢ and 60¢—a few cents a tube more than the ordinary toothpaste, and exceedingly well worth it. Forhan Company, New York.

Forhan's
... your teeth are only as healthy as your gums
Do You Make these Mistakes in ENGLISH?

MANY persons say "Did you hear from him today?" They should say "Have you heard from him today?" Some spell "calendar" or "calender." It is astonishing how often "who" is used for "whom." In speaking or writing there are many common words-colorless, flat, cellular, which are lifeless, monotonous, humdrum.

Wonderful New Invention

For many years Mr. Cody studied the problem of creating indelible habits of saying good English. After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes which have been hurting you. Mr. Cody's students have secured more improvement in five weeks than previously had been obtained by other pupils in two years!

Under old methods rules are memorized, but correct habits are not formed. Finally the rules themselves are forgotten. The new Cody method provides for the formation of correct habits by calling to your attention constantly only the mistakes you make—and then showing you the right way without asking you to memorize any rules.

One of the wonderful things about Mr. Cody's course is the speed with which it works. English students gain as much advantage and better results in five weeks than previously had been obtained by other pupils in two years. You write the answers in fifty questions in fifteen minutes and correct your work in five minutes quite. The shorthand and work of copying have been ended by Mr. Cody! You concentrate always on your own mistakes until it becomes "second nature" to speak and write correctly.

FREE—Book on English

A command of polished and effective English means education and culture. It wins friends and makes a favorable impression upon those with whom you come in contact. It economizes as well as improves your social life. Cody's English gives you added advantages and better opportunities, while your English handicaps you more than you know.

A new book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if you cannot instantly command the exact words with which to express your ideas, this new free book, "How You Can Master Good English—in 15 Minutes a Day," will prove a revelation to you. No one can pass up the chance of a free postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 382 Searle Building, Rochester, N. Y.

S.W. STRAUS & CO.

Sound Securities for People Who Invest Cautiously

SAFETY, as a cardinal principle of investment, has never been more important than it is today. The yield a security offers—the steady income it gives you—should be as high, but only as high, as is consistent with safety of principal. Bankers all over the country are urging their clients to consider safety as the first and most important consideration when buying securities.

S. W. STRAUS & CO. have prepared an interesting, easy-to-understand booklet, "How to Invest Money." Every person seriously interested in safeguarding his future should own a copy of this booklet. It will be sent to you without charge.

—ESTABLISHED IN 1882—
Does Your City Buy Enough Health?

Does your city pay enough to get a competent man to accept the vitally important post of full-time Health Officer? Is your Health Department on duty all day and every day? Can you protect your own health and that of your family in a city which buys only part-time health-protection for its citizens?

Health records show that cities which have able Health Departments and able Health Officers, and that counties with adequate health units, have lowered their death rates and saved millions of dollars in reducing costs attendant upon unnecessary illness.

Does your own city employ the available scientific methods of preventing the spread of communicable diseases?

Does it inspect and protect milk, regulate health conditions in schools and factories? Does it support health centers which demonstrate educational measures for disease prevention and personal hygiene?

If you live in a city which does not have the full benefit of all modern precautions, you can do a great service by finding out all that should be done and bringing such influence to bear as is necessary to make health conditions in your city what they ought to be.

Your Board of Health and your Health Commissioner may need additional ordinances and appropriations in order to expand their work. Remember—they cannot work without tools! Back them up.

A digest of an Annual Report of the Board of Health in a city of 31,000 inhabitants which has an enviable health record will be sent to you without charge. With the report also will be sent a complete set of the Health Ordinances which should be in force in every properly governed city.

The 1930 Valentine -

Sweet thoughts in a sweet form. Whitman's Chocolates are appreciated — a really wanted Valentine.

Send a Sampler to women who you wish to please — your mother — wife — sister (or someone's sister).

Whitman's Sampler as a Valentine is an example of 1930 good taste and good sense. America's favorite!

HEART BOXES
Most typical of Valentine is, of course, the red heart. Whitman's name assures you of quality — and the assortment is specially selected. Choose your heart boxes at your Whitman agency.

The PRESTIGE
The de luxe Valentine! With its useful box distinguished with heraldic design, the Prestige appeals to the eye, the taste, and the practical side of any woman. Each piece, of small Parisienne size with luscious costly centers, is made with infinite hand work.
In one, two and three pounds.
$3 the pound.

The SAMLAGUNDI
A feminine favorite because of its charming appearance and delightful assortment. Then too, the metal box is so useful.
In one and two pounds.
$1.50 the pound.

The SAMPLER
Each year more and more people send the Sampler as their Valentine. What more charming — more able to carry a secret thought! And it is guaranteed a double welcome — for your thought and for itself. Send the Sampler and win a smile.
In one, two, three and five pounds.
$1.50 the pound.

ANY WHITMAN AGENT WILL BE GLAD TO MAIL YOUR VALENTINE
Soups in all their delightful and healthful variety!

Those who are accustomed to travel take a keen pleasure in the soups of many climes, many nations. They have learned that one of the greatest charms about soup is its infinite variety. No wonder they are such ardent admirers of the 21 different Campbell’s Soups, headed by that favorite of world-renown, Campbell’s Tomato Soup. See full list on every label. 12 cents a can.

Look for the Red-and-White Label.

Meal-planning is easier with daily choices from Campbell’s 21 Soups.
This is the telephone's mission

An Advertisement of the American Telephone and Telegraph Company

In this country, a new type of civilization is being reared—a civilization of better opportunity for the average man, comfort and convenience, business enterprise and higher standards that enrich the daily life of all the people.

To build for this new age, the Bell System in 1929 expended more than 550 million dollars. These millions were used to add new plant and further improve service. Hundreds of new buildings, millions of miles of wire, chiefly in cable, eight hundred thousand new telephones—these were some of the items in the year’s program of construction. At the same time, better records were made for speed and accuracy in service.

This American development of instantaneous communication, of fast, far-reaching speech, belongs not to the few, but to the many. It is the aim of the Bell System to permit each personality to express itself without regard to distance.

This is part of the telephone ideal that anyone, anywhere, shall be able to talk quickly and at reasonable cost with anyone, anywhere else. There is no standing still in the Bell System.

Sights You've Never Seen Before and Things You Never Tire of Doing

For two centuries, this winter playground has been the Mecca of people seeking healthful rest and recreation. No other vacation land offers a more perfect combination of mild climate, sunshine, salt sea air, and ozone from the piney woods.

Come now to enjoy the charm of the Gulf Coast where you can play in the open every day and see the places where history was made; where interesting legends of the Indians, the French, and the Spanish, are to be heard and enjoyed.

Easy of access, the Gulf Coast is reached by splendid Louisville & Nashville trains; and modern hotels, camps, and boarding places provide accommodations within the means of all. Write to R. D. Pusey, General Passenger Agent, Louisville & Nashville Railroad, Room 422-D, 9th & Broadway, Louisville, Ky., for descriptive literature.
proves what it IS by what it DOES

A MOTOR car proves what it is by what it does. For performance is tangible, definite—something you can easily check for yourself.

When we say the new Multi-Range Chryslers are swifter in pick-up than other cars—smoother in flight—faster in climbing hills—easier to drive—we are simply stating facts you can prove.

Furthermore, shifting gears back and forth between forward speeds can be done at any car speed without clashing.

In the midst of all today's claims and counter-claims, Chrysler suggests a demonstration, in order that you may learn for yourself why Chrysler inspires a pride all its own.

© 1929 Chrysler Corporation

Chrysler Imperial, "77", "70" and "66" offered in all popular body styles—Prices range from $995 to $3575. All prices f. o. b. Detroit (Special Equipment extra).
LOFTY MOUNTAINS BECKON YOU

GREAT NORTHERN

to this great Vacationland

Who can describe a mountain? You may talk of lofty crags pushing the clouds aside ten thousand feet up, but language falters at the spectacle. Come and see them, you city-dwellers. See your vaunted towers and your street canyons pale into insignificance beside these sky-tearing mountains that stand silent and peaceful high above the lifted fingers of evergreen pine forests.

Exult at the sublime panorama of glacier-carved peaks in Glacier Park and the Waterton Lakes district across the border in Canada. Pause in rapt awe at Mount Rainier's tremendous slopes; at the snow-wrapt shoulders of Mount Baker, eternally watching over Puget Sound. Ride, hike, fish, play golf, in the very shadow of these great friendly mountains... know life as you've never lived it!

The New

EMPIRE BUILDER

The Luxurious

ORIENTAL LIMITED

Great Northern trains—the new Empire Builder and the luxurious Oriental Limited bear you in superlative comfort to these woodlands of the great Northwest. Booklets and information from your local ticket office, or write direct to Great Northern travel headquarters at Saint Paul.
"The faster we go · the better must we sleep!"

says GLENN H. CURTISS

GLENN H. CURTISS, pioneer of the air, has had a tremendous influence on the development of aviation. An expert mechanic himself, he built up the finest engineering staff in the country, and as a result, The Curtiss Company are outstanding builders of planes and engines for commercial and government uses. His early planes, built on aerodynamic principles now acknowledged as correct, were the forerunners of the planes of today.

SIMMONS, largest makers of beds, springs and mattresses, have developed scientifically the sleep equipment for complete relaxation and healthful sleep. THE WORLD'S MILLIONS KNOW THIS ADDRESS...THE FIFTH AVENUE BUILDING

Many millions throughout the world call to mind a definite picture when Fifth Avenue and Broadway are mentioned. The Fifth Avenue Building rises at their intersection. . . Hundreds of thousands of buyers come to The Fifth Avenue Building to inspect and to buy the merchandise displayed, for here are housed the offices and display rooms of the leaders of many lines of business. Women's wear, men's wear pottery, glass, office equipment, cards and stationery, laces, toys, novelties, and kindred lines are bought and sold within these walls. . . The building is available from any part of metropolitan New York. It is ten minutes by subway to Pennsylvania Station and thirteen to Grand Central. Busses and surface cars pass the doors. Elevated lines are within the radius of two blocks. . . A booth in the lobby supplies information concerning the lines listed within the building and gives directions to places of civic interest and amusement. An excellent restaurant serves good food in the pleasant surroundings of the main floor. . . Allow us to show you about the building during your next trip to New York.

THE FIFTH AVENUE BUILDING

"MORE THAN AN OFFICE BUILDING"
O NIMBLE and fast is this roomy 58-foot commuting cruiser that it will take you in a few minutes completely away from feverish business, boresome folk and congested highways. A spacious cabin encloses you in tasteful luxury. You may eat, sleep or just loaf aboard in complete privacy. The ship is completely found; being provided with dishes, linen, silver, cooking utensils, stove, refrigerator and sleeping equipment... You may entertain distinguished guests or carry friends in approved fashion to club, regatta or social affair. Chris-Crafting is now the vogue in exclusive entertainment... Commuting from home to business is a delight in this 50-mile an hour, seaworthy, streamline Chris-Craft... Open forward cockpit, luxurious cabin, bridge and rear cockpit offer variety for all moods. Big ship performance permits fast travel in heavy seas. Let the Chris-Craft merchant show you how Chris-Craft ownership opens nature's door for fast water travel, recreation, exploring, fishing, entertaining—real health and pleasure. The 24 Chris-Craft 1950 models; runabouts, sedans, commuters, cruisers, yachts—all explained in a new illustrated catalog... Chris Smith & Sons Boat Company, 762 Detroit Road, Algonac, Michigan.
For the man who
“always knows what to do”

There is such a person in every family. The one to whom the others turn instinctively in every crisis.

But there is one emergency when even this “friend in need” is often at a loss to know just how to proceed. That is when death occurs.

Unfamiliar questions arise—questions which must be answered at once... what should be done first?... who shall the funeral director be?... where shall the funeral be held?... what sort of casket will be most suitable?... what should it cost?... what about newspaper notices, automobiles?

There is rarely much time to find out about these things. The obligation is a heavy one. Yet the man (or woman) responsible is expected to know just what to do—and do it perfectly.

From our long experience we can help—before the emergency arises. In a little book, “Funeral Facts,” prepared with the aid and advice of leading funeral directors and health authorities, we have published the answers to those questions often so difficult to ask—and to answer.

We will gladly send a copy in a plain envelope, without charge, to any address upon request. Just write Department P3, 60 Massachusetts Avenue, Boston, Massachusetts.

To Rid Teeth of Destructive Germs

Remove film twice every day

Film that is found by dental research to discolor teeth and cause serious tooth and gum disorders.

FREE . . . a 10-day tube of Pepsodent

HAVE you noticed what you believe to be symptoms of decay?

Then it is time to change your method of tooth cleaning, for decay results from germs—pyorrhea from germs and tartar.

Germs are covered and imprisoned by a dingy, clinging coating on the teeth and gums called film.

Germ-laden film fills every tiny crevice in enamel. It clings so tightly that you may brush until you harm the teeth and gums without dislodging it effectively. That is why all ordinary methods fail in combusting film successfully.

Acts in a different way

To reach and remove these germs, film must be combated. To remove film dental authorities developed the different acting tooth paste, Pepsodent.

First, Pepsodent curdles film,

then light brushing easily removes it . . . safely, gently. No pumice, harmful grit or crude abrasive, but a fine, creamy paste commonly prescribed for soft teeth and tender gums.

When shall we send your supply?

You can tell that Pepsodent is different from all other ways the instant it touches your teeth. Can see the difference in results before your free tube is empty. Here is a way to love your teeth plus far greater protection from these serious diseases. Write to nearest address immediately for your supply to try.

Use Pepsodent twice a day. See your dentist at least twice a year.

nation...cross "the longest gang-
plank in the world" to the New "Paris"... (just re-engined for
speed...redecorated for smartness
and modernity...a crystal smoking
room...sun deck with sidewalk cafe
...practically all outside rooms with
both)... and you're in Paris herself...the
same gracious service, the same brilli-
ant backgrounds... the same gayety,
the same infinite finesse.

5½ days to Plymouth, England

Sail from the heart of Manhattan on one of the
weekly express liners "Ile de France," "Paris," or "France"... direct to Plymouth, a waiting
Pullman express for London, a few hours later the
covered pier at Havre, three hours express to Paris.
A Movie Camera that Understands Amateurs

Anybody Who Can Press a Lever Can Operate It!
Even the Moderate Purse Can Afford It!

A Remarkably Simplified Home Movie Outfit, Developed by the People Who Made Still Photography so Easy that Picture-Taking Became a Game for Children

ITS simplicity is amazing. For it is made for amateurs, by people who understand the requirements of amateurs. A home movie camera made for those who know but little about picture-taking.

Look through a finder and press a lever; and you are taking movies...in black-and-white or in full color. You can operate it, even if you have never had a movie camera in your hands before—as easily as taking a snapshot with your child’s Brownie!
And...you can afford it, even if your income permits only the minor nice things of modern life.

Don't deny yourself the great thrill of seeing the ones you love most in the ways you love most to see them, never to be lost, never to be forgotten.

Developed by the Men Who Simplified Amateur Picture-Taking

Unbiased by the precedents and prejudices of professional cinema camera design, the men who made still photography so easy have now made home movie-making equally simple for you.

With the Ciné-Kodak, all you do is press the lever and you take movies. Then send the film to any Eastman processing station—developing is included in the price of the film. And, with the Kodascope, you project the pictures as easily as playing a record on the phonograph.

That's the point to remember about the Ciné-Kodak. For you want the simplest movie camera you can get.

With Ciné-Kodak Safety Film, regular or panchromatic, it takes black-and-white pictures. By using Kodacolor Film and the Kodacolor Filter, Ciné-Kodak B or BB f.1.9 takes beautiful pictures in full, natural color—every color that the eye can see is recorded for your home movie screen.

Any dealer will be glad to demonstrate the Ciné-Kodak and to show you Kodacolor on the screen. To permit buying from income rather than capital, many offer an attractive deferred payment plan.

Come meet the Spring in SAN ANTONIO

The huisache is a giant, living bouquet of yellow puff balls.... red bud is a crimson splash on the hillsides.... primroses and wine cups pattern the far-flung carpet of blue bonnets which mirrors the Texas sky.... a caressing breeze whispers softly.

There's nothing to equal springtime in San Antonio! Brilliant sunlight floods the countryside nearly seven hours every day.... all Outdoors is your playground, with golf, motoring, tennis, fishing, polo, horseback riding, picnicking and kindred recreation to fill the hours as the days go by.

Come meet the Spring in San Antonio and let its soft blandishments banish care and build up health!
Now! Good Hardware for cottages as well as castles . . . and the cost is not prohibitive

If you are building a modest, six-room cottage—Corbin makes good hardware for it. And at a price you can afford.

The fact is Corbin makes good hardware for every type, size and kind of building. But that doesn't mean it all costs the same. The cost depends on what you need and want.

After all, the real difference between cheap and good hardware is not price. The difference in first cost is little—less than 1% of the total cost of the building. But the difference in what you get—in service, looks, and security—is great.

If you're building a home to live in—to last—to give you happiness and comfort—don't skimp on the things that cost you least. You'll only save pennies—later to spend pounds repairing broken locks, replacing hardware that rusts and ruins, that won't fasten, won't work.

Whether the house you're building be six rooms or sixty, give it good hardware. Corbin makes it—and at a price you can afford.

Send for this helpful hardware booklet—Free!
Write Dept. N-2 for "Good Buildings Deserve Good Hardware." It contains important information you need before building—also many illustrations of correct hardware for different periods of architecture.

Isn't there some one in your home who loves good coffee... but fears to drink it at night?

Is there always a missing cup at your dinner table? Does some one have to pass up coffee? Then try the coffee that lets you sleep. It's particularly welcome for evening parties.

Coffee is America's national beverage. Its cheer makes every meal more enjoyable.

Yet at dinner—chief of family gatherings, where coffee adds so much to pleasure—thousands never drink it for fear that it will keep them awake. And many who are fond of its flavor do not drink it at all.

No longer need you practice denial! Rich, pure coffee is now available to every person who has been forced to give up coffee-drinking. For today, in the making of Kellogg's Kaffee Hag Coffee, the caffeine is being removed from the world's choicest coffee beans. And so skillfully is the caffeine extracted, that not one bit of coffee's priceless flavor is lost!

Is there one missing coffee at your house? Surprise him tonight. Serve Kaffee Hag Coffee. Make it just as you make any other coffee. He can drink all he wants. It will not keep him awake or affect nerves in the slightest degree. And how much more pleasant than substitutes that can never satisfy the true coffee lover.

Kaffee Hag was the first caffeine-free coffee. Now Kellogg, after years of experiment, has wonderfully improved the blend. Today there is no finer coffee to be found. Ask your dealer for Kellogg's Kaffee Hag in its new vacuum can.

We'll send you a sample... For 10c, to cover postage, etc., we will mail you a 10-cup sample of this great caffeine-free coffee. Try it at night. Flavor! Aroma! Cheer! And restful sleep!

KELLOGG COMPANY
Dept. Rb, Battle Creek, Michigan

The Highest STATE of Grandeur . . . . Have You Seen ALL of It?

COLORADO

Any part of Colorado offers outdoor fun and scenic thrills in abundance—but you have to see the entire state to realize the endless variety and the supreme magnificence of its beauties and attractions. Until you really KNOW Colorado, you cannot understand its wealth, or the year-around joyousness of living here.

Overnight from half the nation, two nights from almost anywhere, Colorful Colorado is close at hand, economical to visit on your next vacation. Meanwhile, the coupon will bring you a richly illustrated booklet of startling Colorado facts.

THE COLORADO ASSOCIATION

Colorado's sunshine puts richer flavor into Colorado's fresh or canned vegetables. Even seed grown in Colorado gives special deliciousness to vegetables grown somewhere else.

Pump and Carry

THOUSANDS of homes will
be modernized this year by
the installation of a reliable water
system. Thousands of families
will let a few cents' worth of
gasoline or electric power per
day free them forever from the
endless task of carrying buckets.

MYERS Water Systems

are built to meet every need and condition of the
country or suburban home. They give you,
at lowest possible cost, the infinite comfort
and convenience of fresh running water al-
ways on tap. Designed for operation by hand, windmill,
gasoline engine or electricity. Capacities up to 10,000 gal-
loons per hour. Trouble-proof, durable, practical— guar-
anteed by the world's foremost pump manufacturers.

The source: MYERS dealer will be glad to
give you estimates and advice. Send for
his name, together with interesting booklet.

GOOD NIGHT

The Book-Cadillac Hotel
DETOl

Good night

It was early evening. A long night
stretched still and far 'til morning. A
bitter winter wind shrilled and whistled
and stung. His rumpled and warm bed
beckoned ... and he hurried and he
smiled and he called his floor and he
locked his door and he sung and sang
and made his room look like home and
he piled his clothes in disarray and he
sank with a grin into great and com-
forting billows of warm and woolly
blankets to rest and read. And he slept
... and in his dreams ... he sauntered
again into the offices of the men who
could purchase the things he came to
Detroit to sell and she sold all night
long. And in the morning ... rested,
hungry, fit and fine, he cracks an ex-
ultant towel at another sunny day. See
you soon. Good night.

“Mention the Geographic—it identifies you.”
Come to
Shakespeare's
home town!

When you get to England this year, step right into Shakespeare's home town! See the actual house where the world's greatest dramatist began life. See Anne Hathaway’s Cottage and the chimney corner where Anne and he used to sit . . . in that lovely little old village in Warwickshire.

When you reach London make your way first to Euston Station and book the Circular Tour that will take you right round the Shakespeare Country. It's all planned out for your comfort and convenience by the London Midland and Scottish Railway. Remember it's Euston Station you want.

BELGIUM BECOMES
EUROPE'S CENTER

Both tourists and business chiefs are making a bee-line for Antwerp this year. The great International Maritime, Colonial Transport and Flemish Art Exhibition is now open—until October—under the patronage of their Majesties the King and Queen of the Belgians and supported by the Belgian, British, French, and German Governments. Exhibition literature and full information from Dorland, 205 East 42nd Street, New York City, or from any travel bureau.

ANTWERP EXHIBITION

A million miles
of sunshine in
TUCSON

A DIFFERENT vacation awaits you in this sunny, half-mile high sportland "on the Mesa" ... with its ever-changing panorama of gorgeous colors ... its wonderfully clear air and extraordinarily low humidity. A "winter" vacation in Tucson is not expensive ... yet there's riding, hunting, dude ranches, Indian Villages, Missions, golf (all-grass courses), tennis, country clubs, aviation ... and Old Mexico, two hours distant.

Ask the Sunshine Club for free booklet and information. Hotel reservations and personal service to visitors is gratis. Winter trains on Rock Island and Southern Pacific leave NOW.

Safeguard your Bank Account!
If Your Checks are Raised, who loses?

Send for an Arnold Check Writer at Our Expense

Get an Arnold Check Writer on free trial for 10 days and see how wonderful it really is. Our Special Offer now enables you to secure it without any obligation to purchase. If it doesn’t sell itself, don’t keep it. The FREE TRIAL coupon below will bring it to you by return mail, postage prepaid, with details of our Special Offer in effect for a limited time. Just mail the coupon. No obligation.

NINE times out of ten YOU are the one who stands to lose if a crook gets hold of your check and raises it. Modern business demands modern protection against clever check raisers. They can easily alter the amount of any check that is not protected.

Losses from fraudulently manipulated checks were estimated at $300,000,000 in 1928. Get modern protection by using the new model Arnold Check Writer. The new Arnold will give you 100% protection. Does work equal to machines costing $60 or more and yet costs no more than a good fountain pen. Prints and shreds the exact amount in acid-proof ink. Self-inking. Automatic force feed conditionally guaranteed for five years—but built to last a lifetime.

FREE TRIAL COUPON
Begin your ramble at the Royal Leamington Spa. High Warwickshire hedges escort you to Kenilworth and the most famous Baronial ruins in England. The Earl of Leicester spent more than five thousand dollars a day entertaining Queen Elizabeth there in 1575.

Spend a lazy afternoon in Stratford. In the house on Henley Street where Shakespeare was born you can see a letter written to him by Richard Quincy. His very home has been perfectly preserved through the centuries and even the gardens contain shrubs, trees, and flowers mentioned in the plays. The loveliest of churches is his hallowed resting place, and in the north aisle is the font in which he was baptized.

A pleasant woodland path takes you to romantic Shottery where Shakespeare paid court to gentle Anne Hathaway. It is all so real that you expect him to suddenly appear.

Special Great Western Railway tours leave London daily winding through this most delightful bit of England.

The new Guide No. 71 will be gladly mailed free on request

WINTER MENUS NEED CRISPNESS

Do you ever get tired of the heavy dishes of winter? Don't you long for something crisp and appetizing? You can help balance your winter diet—satisfy that vague longing of your appetite—by serving ready-to-eat cereals.

Kellogg's Rice Krispies are ideal. Nourishing. Delicious flavor! And so crisp they actually crackle in milk or cream. Try a bowlful sweetened with honey or topped with canned or preserved fruit. It's great. Why not order a red-and-green package from your grocer today? Made by Kellogg in Battle Creek.

Kellogg's

Corn Flakes, Rice Krispies, ALL-BRAN, Pep Bran Flakes, Kellogg's Shredded Whole Wheat Biscuit, Whole Wheat Krumbles, Kaffe Hag Coffee—the caffeine-free coffee.

Rolscreens, the modern all metal window screens are stored by a touch which rolls them up out of the way, hidden and protected—a decided saving of labor, expense and storage space.

Rolscreens are the outstanding rolling window screens because of the special patented features so necessary to durable, dependable, long-service. Electro-plated "AluminA" (double life) wire is woven to our own specifications—it is scarcely visible. Look for the trade mark, Rolscreens.

Illustrated Rolscreen Booklet mailed upon request.

Deaf Hear Again Through New Aid

Earpiece No Bigger Than Dime Wins Enthusiastic Following

Ten-Day Free Trial Offer

After twenty-five years devoted exclusively to the manufacture of scientific hearing-aids, the Dictaphone Products Co., Inc., Dept. 500 B, 220 West 42nd Street, New York, N. Y., has just perfected a new model Acousticon that represents the greatest advance yet made in the recreation of hearing for the deaf. This latest Acousticon is featured by a tiny earphone no bigger than a dime. Through this device, sounds are clearly and distinctly transmitted to subnormal ears with wonderful benefit to hearing and health alike. The makers offer an absolutely free trial for 10 days to any person who may be interested, and a letter will bring one of these remarkable aids to your home for a thorough and convincing trial. Send them your name and address today! Advt.
Your love can do no more than this... you would not have it less

It is the final record of affection... to mark the last resting place with quiet beauty, unchanging as the hills. Perhaps you are ready, now, to select this memorial... Guardian Memorials are hewn from rugged Vermont granite. Designed by competent artists, and exquisitely carved, each memorial will be in perfect keeping with the setting you have chosen. Against the sun and rain of centuries, it stands inviolate... flawless in contour, the inscription clear and legible. A Guarantee Bond is your protection.

We shall be glad to send you, without charge, a copy of the booklet, "To Mark the Place with Beauty Forever." You will find it helpful in the selection of a memorial. Guardian Memorials are distributed by reliable retail memorial dealers.

POWER LAWN MOWERS

"Mention the Geographic—It identifies you."
Famed Symbol of Sunshine, Health, Comfort.

Perhaps the most photographed and pictured scene in the world—over 300 days a year pictured in sunshine. In winter the view is much the same as in summer, because there are 27 days of sunshine each winter month and less than a third of an inch of moisture—from records of over 300 years.

And it’s the preponderance of bright sunshine from bright, cloudless skies, with low relative humidity, that makes the Pikes Peak Region the place of Sunshine, Health, Comfort all the year round.

Know more about this Region. Ask to see the records. Find out about the place to recuperate, find new vigs. Ask for “Winning Health,” “100 Winter Days,” about the city, its homes, its living advantages, about free stopovers the year around. Address—

ANNOUNCING

A NEW 6
OF AMAZINGLY LOW PRICE

AND

A NEW 8
SENSATIONAL IN VALUE

BY

DODGE BROTHERS

Climaxing fifteen years of successful production of dependable motor cars, Dodge Brothers announce a new Six, at amazingly low prices, and a new Eight of commanding value, as companion cars to the present Dodge Six and Dodge Senior. All four lines, exhibited at the Automobile Shows, will be displayed by Dodge Brothers Dealers everywhere.

UPHOLDING EVERY TRADITION OF DODGE DEPENDABILITY
Everywhere this emblem means
ETHYL GASOLINE

The oil companies which supply more than fifty percent of all the motor fuel used in the United States and Canada are now mixing Ethyl antiknock fluid with their gasoline to provide a premium fuel that is worth a premium.

Everyone of them has agreed to conform to the standard set by the Ethyl Gasoline Corporation. This means that they will use base gasoline of specified quality, and mix with it sufficient Ethyl fluid to "knock out that "knock" in cars of average compression, and to develop the additional power of the new high-compression cars.

So wherever you drive—whatever the oil company's name or brand associated with it—any pump bearing the Ethyl emblem represents that standard, or better.

Remember that while Ethyl Gasoline is colored red for identification, not all red gasolines are Ethyl. Always look for the Ethyl trademark.

Ethyl Gasoline Corporation,
New York City.

The active ingredient now used in Ethyl fluid is triethyl lead.

TRY ETHYL THIS WEEKEND

Week-end driving is hardest of all. So we ask you to try Ethyl then. See how much longer you stay in high; how much better control you have; how much fresher you feel at the end of the trip. Small cars and older cars benefit from Ethyl Gasoline just as much as larger, more expensive new cars.
Why MOHAWKS Ride Easier

Because 250 massive buttressed shoulders carry all shocks to the "knees" of the Mohawk Flat-Tread Special Balloon—the 6-ply sidewalls that are built for flexing. This scientifically correct tire grips the road, spreads the load, saves the tread, absorbs the shocks...requires lower air pressure which immensely increases traction and riding ease. Look for the buttressed shoulders—the distinguishing marks of a distinguished tire.

Featured by Quality Tire Dealers Everywhere

GO Farther!

THE MOHAWK RUBBER COMPANY...AKRON, OHIO

For Seventeen Years Makers of Fine Tires
Balance—and long, willing service—designed in

How should a pencil be built to serve as naturally as your right hand? For one thing, it needs Balance, so that bulk and top-heaviness will not intrude. And it wants a mechanism so sure, so sweet, as to perform like new for uncounted years. Study these pictures. You'll see and sense inbuilt Balance and efficiency in such beautiful machinery. Then cradle this instrument in your hand, and write with it, and you'll know what Balance has done for writing.

At better stores everywhere
